Local Supply of Butter Is Still Adequate

for All Purposes.

Though the butter market generally has an atlea shrinkage in cream receipts has been noticed in the past two days. This is likely to atiffen the market shortly, which will insure a maintenance of the present prices until the Fail rains set in. East continued firm under light arrivals from the country. Single cases of ranch egs were quoted on the street at 30 cents with 1 to 2 cents off on large lots. Poultry receipts were fair and a brink demand took care of everything at the es-isbigrhed quotations. Though the butter market generally has

isblirhed quotations.

Puyallup Hop Yield Light.

PUYALLUP, Wash, Sept 13.--(Special.)--As a result of the heavy rain Wednesday, much fruit was softened and large quanti-ties of the hervies will go to the cannery. Nearly 500 crates went there yesterday. Northern Indians who came to Sunner and Puyallup to pick hops, found conditions so masticfactory that they have left for home. The hop yield is much lighter than was expected, and many of the fields are not being picked, making the demand for stekers unusually small.

Four Cars of Fancy Bananas,

Four cars of bananas were received yesterday and unlike the previous shipments all were in fine, green condition. Peaches came forward a little more freety and sold well at good prices. Grapes were abundant and easier.

the talk of over-production and of neces-sity of shutting down of mines. The gen-eral level of commodity prices moved lower in August, mainly because of weakness in manufactured goods offsetting higher prices of farm products. These latter have, how-ever, weakened this week, and values as a whole are lower than for nine months past. The money situation is also an ir-regular one, it being reported more active of the West but rather enalty at

ment at the South, are still attributed in

In the virgin forest growth is just about balanced by decay. In the Western for-ests, however, natural deterioration is greatly augmented by forest fires. The fires usually do most harm by damaging mechantable timber, but, great as this injury is, vastly more actual loss in forest wealth results from the yearly burning over of the grass and undergrowth of the forest. Ground fires do not consume the large trees, but they destroy seedings outright and injure growing trees so that they quickly decay. Finally, the forest floor, composed of a mold of needles, twigs and mosses, is burned away. Far beyond the present influence of the ment at the South, are still attributed in part to this cause.
