Work is going forward rapidly on the Beliwood sewer system. On the main confull the steam digger has crossed Rast Thirteenth street, on Multinomah avenue, going eastward. Practically all the work on this sewer system is being done by machinery, except where handwork is needed to deepen the trenches. The steam digger works very rapidly excavating the trenches for the sewers. It is simply an endiess chain of etcel buckets which scoop up the dirt and empty it in a stream to one side. For the main and larger conduits reinforced concrete is being used, which is the first sewer material of the sort to be used in Portland. Concrete is said to be less expensive than brick and stone and the steam digger has crossed less expensive than brick and stone and less expensive than brick and stone and is just as enduring. Sowers of lesser dimensions are of terra cotta. Every lot in the district has a connecting pipe which is brought to the curb, so that the owner can connect up with it with no further expense. Besides the regular inspectors in the employ of the city the Sellwood Board of Trade has a committee of inspectors, one visiting the work every day. The contractors may they welcome full inspection, as they want to every day. The contractors say they welcome full inspection, as they want to turn out a first-class piece of work.
