

Phases of Industrial Growth in the Pacific Northwest

KLAMATH IS GOOD

Oregon Trunk Seeks Timber of That County.

KLAMATH FALLS TERMINUS

People There Believe Their City Will Be Road's End Until Such Time as Hill Is Ready to Push His Line on to San Francisco.

KLAMATH FALLS, Or., Dec. 5.—(Special.)—There is no longer any doubt that the objective point of the Hill railroad through the Deschutes country is the great soft pine timber region of Klamath County, and that Klamath Falls is to be the terminus until such time as the road is pushed on to San Francisco. Two crews of engineers have been engaged in the northern part of this county, one making a preliminary survey of the entire route to the east side of Upper Klamath Lake and going out over the Southern Pacific from here, and representing that the party was a band of timber cutters driven out of the woods by the heavy snows of the past few weeks.

Beginning nearly four years ago with the acquisition of the Klamath Lake Railroad, extending from Thrall to Polegama, and some 30,000 acres of timber land that had been brought into the holdings of the company by Jersey Lindley, the Weyerhaeuser Timber Company has bought other holdings of the Jenny Creek plateau and throughout the choicest belts of the great Klamath forests until the holdings of the big syndicate now approximate 150,000 acres. This represents the investment of several millions of capital by this one company.

Shewlin & Carpenter, heavy operators, have recently made extensive purchases of the Deschutes Lumber Company, formed by Alpena, Mich., men; the Yockey Lumber Company of Minneapolis; the Hixon Lumber Company, S. S. Johnson and G. H. Glichstein, secured holdings aggregating about 200,000 acres.

Hill Interests Break Ice.

The coming of these timbermen to this section of Oregon is recognized by those in touch with the facts as the first advance of the Hill interests into this territory. Confident of the speedy revival of business following the disturbance in the autumn of 1907, these associated timbermen all friendly and in close touch with the Hill railroad interests, sought to take advantage of the existing depressed condition of the lumber market and demand for timber, thereby driving many good bargains in taking over holdings of the best of yellow pine timber. It seems that was done with an understanding that the Hill roads would build a branch as soon as necessary to bid for the traffic to its natural outlet in markets of the Middle West and Mississippi Valley States. The market demand is rapidly being stimulated in the country east of the Rocky mountains by bumper crops of wheat and corn and the roads will make an effort to meet the necessities of the occasion with rates that will place the lumber in that territory.

It is recalled by a man well informed on the railroad situation that the first advent of the Hill interests to prepare the way for building the North Bank road into Portland was the selection of the site for a great sawmill in the Pentecost tract, owned by the Weyerhaeuser Timber Company. It afterwards developed was done in the interest of the railroad. Therefore, it is pointed out, the entrance of the great timber syndicate into the country into the lumber industry of this section means that it is the forerunner of the Hill railroad, which will claim a large share of the traffic that will be developed by the plants of the timbermen.

Small Road Bought First.

The first railroad mileage in California and in Oregon south of Portland, virtually owned by the Hill railroads, Klamath Lake road, for the Weyerhaeuser Company acquired it with the idea of eventually tearing up the track and relaying the rails to carry the lumber to the Jenny Creek plateau to the shore of Upper Klamath Lake—unless it could in some way be utilized as a link in a line that would serve the purpose of the great timber syndicate or the Great Northern and its associated lines. The likelihood of its being utilized as a link is small, for it has heavy grades, sharp curves and a trackage extending only about 25 miles.

Much Grain to Ship.

Klamath County wheat has long been known for its high milling quality, but until this year's lack of transportation prevented its shipment to outside mills, though it was sought for blending purposes. This year the crop harvested was the largest in the history of the agricultural development of the basin, and as a result a good many carloads have been shipped, California millers drawing on this source of supply. Three local mills, at Klamath Falls, Merrill and Bonanza, are steadily grinding and receiving the full complement of the crop, but there is more than may be required for local consumption during the coming year, and this surplus will be quietly absorbed by the mills of the Southern Pacific lines in California and Oregon.

Each succeeding year will record largely increased production of winter crops in this county, for the irrigation system is being pushed to completion and will add many thousands of acres to the producing areas for the seasons of 1910 and 1911. That means more tonnage for the railroads and new wealth for Oregon.

Frost May Get Potatoes.

WOODLAND, Wash., Dec. 5.—(Special.)—After two days of cold weather, ice having frozen to a thickness of one and a half inches last night, the weather

M'MINNVILLE, IMBUE WITH BOOST SPIRIT, PLANS TO ADVERTISE.

COZY CORNER OF M'MINNVILLE COMMERCIAL CLUB RECENTLY FURNISHED BY ACTIVE ORGANIZATION.

M'MINNVILLE, Or., Dec. 5.—(Special.)—This city is making preparations to cultivate the boost spirit effectively next year. A soliciting committee has secured pledges from the business men of the city sufficient to insure a great amount of publicity work proposed to be done in the name of the Commercial Club. The local Development League, which formerly had charge of the publicity funds, will merge with the Commercial Club. It is a social organization formed nine years ago and still retains a flourishing membership. The publicity bureau of the Commercial Club has secured a suite of rooms adjacent to those of the social organization.

GRAIN ACREAGE IS SMALL

Bad Weather Hinders Farmers in French Prairie.

GERVAIS, Or., Dec. 5.—(Special.)—Not over one-quarter of the acreage usually sown to winter wheat in this vicinity has been plowed, and of this not all has been seeded. Most of the acreage is in cheat hay and little fall wheat is sown. Many farmers have not harvested their potatoes and stand to lose heavily on account of the freeze-up.

Baker City May Back New Mill.

By the closing of a deal on the "Arkansas" mine, in the Seven Devils country, which has just been completed, a local company asserts that the question of the erection of a smelter in the Snake River Canyon is settled.

Snake River Canyon Gets Smelter.

BAKER CITY, Or., Dec. 5.—(Special.)—By the closing of a deal on the "Arkansas" mine, in the Seven Devils country, which has just been completed, a local company asserts that the question of the erection of a smelter in the Snake River Canyon is settled.

O. R. & N. Gives Picture Show.

HOOD RIVER, Or., Dec. 5.—(Special.)—Under the auspices of the O. R. & N., members of the Hood River Commercial Club and their families were entertained by a lecture and moving picture show at the Opera House last night. The subjects were the Columbia River and Willamette Valley and California.

THROUGH SLEEPERS PLAN

Portland-Lewiston Service Possible by Joint Operation.

LEWISTON, Idaho, Dec. 5.—(Special.)—Through Pullman sleeper service will be established between Portland and Lewiston by the O. R. & N. and the Camas Prairie Railway, beginning tomorrow evening, the running time being 14 hours. This is the result of the operation of the O. R. & N. line between Lewiston and Riparian and the Lewiston-Grangeville branch of the Northern Pacific.

45 POTATOES FILL A SACK.

STAYTON, Or., Dec. 5.—(Special.)—A man who raises big potatoes and whose farm is in Stayton's environs is Willis Caldwell, who on Tuesday of this week brought to town three bushels averaging two pounds apiece. They were sound of body and minus bumps or lumps.

Mr. Caldwell says he gathered 450 bushels of these fine Oregon potatoes from a single acre, and so thickly did they bestrew the ground after being dug that it was next to impossible to walk across the field without crunching them beneath one's feet. After 450 bushels had been carried away, four rows and 25 pigs were turned into the acre tract and left there one week. At the end of this period Dennis Caldwell, a brother of Willis, went into the field and gathered up enough more potatoes to fill two sacks.

WESTON DAM IMMENSE

WALL WILL BE 1100 FEET LONG AND 210 FEET HIGH.

Project Will Cost \$250,000 and Will Furnish Water for 24,000 Acres.

WESTON, Or., Dec. 5.—(Special.)—Maps of the reservoir site and plans of the dam for the proposed Weston Irrigation project have just been filed with the Secretary of State. Maps of the high lines and laterals were filed several weeks ago.

The project as planned is a stupendous one. The huge dam will be no less than 1000 feet wide at its base, and will extend across the canyon for 1100 feet. Its concrete core will be 210 feet high, four feet wide at the bottom and 18 inches at the top. The dam will have such a gentle slope both above and below the core that teams may be driven at will over its entire surface. It will create a reservoir extending three miles back into the mountains, and containing 15,000 acre feet of water. Two million cubic yards of earth and rock will be required for the fill, and the estimated cost of the reservoir alone is \$250,000. The extreme width of the dam in proportion to its height is specified by Government regulations, and renders breakage impossible.

A natural site has been selected for the dam a short distance above Rocky Ford, on Pine Creek, about three miles above Weston. Three sites offered almost equal advantages, but the engineers finally decided upon this location because of better opportunities for securing earth and gravel. High lines will leave the canal on either side of Pine Creek, each of them about four miles long. Laterals will convey the water many miles further, one of them extending to the town of Athol, which will profit equally with Weston by the project. It is estimated that 24,000 acres of extremely fertile land can be irrigated. Most of this is now valued at \$100 an acre, and its increase in value will reach into the millions.

H. F. Marble, of North Yakima, Wash., is the engineer in charge of the project and confidently asserts its entire feasibility. Mr. Marble has had much to do with irrigation projects, and is now superintending the Furnish dam in the west end of the county. Local promoters are

INDIANA MAN LIKES OREGON

He Thinks the State Will Stand Expansion for the Next 25 Years.

LOGANSPORT, Ind., Banks of the Wabash, Dec. 2.—(To the Editor.)—I have been reading in a recent issue of the Oregonian regarding a man from Polk County, Oregon, who is afraid that the State of Oregon is going to be over-boomed. Just put that man in a bottle and cork up the latter tightly.

I visited Oregon in 1888 and again in 1909, spending one week at Medford, Or., with my friend, Jesse Enyart, formerly from Logansport, Ind., and also in pear orchards; also The Dalles and Hood River County. Think of the undeveloped Central Oregon, and then think of any one fearing the overbooming of the great State of Oregon. I saw land sold in 1888 at The Dalles for \$2.50 per acre, and now this same land sells for \$100 per acre. This makes me tell you young Hoosiers to take Horace Greeley's advice, "Go West, young man"; go to Oregon. I know of several Hoosiers who are preparing to leave Hoosierdom next Spring to help fill up Oregon. I have a brother who left Portland in 1888, and he almost sheds tears every time he thinks of Oregon. He is now closing out his business of several years in Moscow, and is returning to Oregon at the age of almost 70 years. Oregon will stand booming for the next 25 years. I. N. CRAWFORD.

WATER IS AID TO COUNTRY

Market Value of Farm Lands in Southern Oregon County on Which Crops Are Grown Is Quoted at \$70 an Acre.

OREGONIAN NEWS BUREAU, Washington, Dec. 5.—The pleasant climate, beautiful natural surroundings, abundant and constant water supply, and the fertility of the soil on the Klamath project in Northern California and Southern Oregon are proving attractive to many farmers in other sections of these states, and a large influx of new settlers has begun.

In this connection it is especially interesting to read the experience of a former farmer from the Imperial Valley of California, who took up his home on the Klamath project a little over a year ago. Mr. Maston's experience in Southern California, where irrigation is now practiced so successfully, is doubtless very valuable to him in his new home, but his success must be credited largely to the natural advantages and climate of the Klamath country. Mr. Maston says:

During our residence of only one year in the Klamath Valley we have raised grain, including wheat and alfalfa, and alfalfa. In this country grain yields abundantly. Having a Spring of four months in which to sow crops, the farmer has ample time, with a small outfit, to put in a large crop. We sow wheat in March, April and May, and our yield averages 30 bushels per acre. Oats will make a sure crop if sown as late as July 1. Our average yields per acre this year are as follows: Wheat, 30 bushels; barley, 60 bushels, and oats, 80 to 75 bushels. Our alfalfa yielded four tons to only two cuttings, thus making the labor on each very small in comparison to the yield. It sold for \$12 per ton baled. Prices received for other crops are as follows: Alfalfa, \$10 per bushel; oats, \$1.50, and barley, \$1.25 per hundred weight. The alfalfa yielded us a gross of \$90 per acre, and it is my experience that the labor required to farm Klamath land is about 10 per cent less than in the majority of farming districts of California and elsewhere, where the same crops are harvested in this section. The probable yield of these crops without water is less than half that on the irrigated farms. We have raised alfalfa on 500 acres, and our crops are grown in \$70 per acre, and it is all under Government ditch.

CLIFFS TAKES ON SPURT, MANY REALTY DEALS BEING MADE.

CLIFFS, Wash., Dec. 5.—(Special.)—T. L. Crum, one of the oldest residents of Cliff's, has disposed of one of his five-acre tracts a mile from town, containing an assortment of young fruit trees, to Fred Tucker, a former resident of California, for \$2500. Three of the vacant ten-acre tracts a mile from town were sold last week to nonresidents for \$3000 each.

5 ACRES SELL FOR \$2500

Canada has 20 wireless stations, and new wireless service is being established between Prince Rupert and Vancouver.

OREGON MAN PROVES PRODUCTIVENESS OF PROPERTY.

WATER IS AID TO COUNTRY
