E. L. Thompson Says Intense Cultivation of Agricultural Districts and Artistic Development of Urban Centers Are Predominant Thoughts of Many Parts of Germany, Austria and Belgium.

Frederick Augustus Bridge at Dresden.

NE of the things abroad that impressed me, said E. I. Thempson, the banker, who recently returned from a trip through Europe, was the thrift of the farmers in the closely-settled countries. Take Beigium and Holland, for instance, and its basis of future and continued growth, it all came home to me vividity that the thing to do besides beautifying many cities of their paintings and their matural charm as assets in a manner similar to the une made by that the thing to do besides beautifying and their matural charm as assets in a manner similar to the une made by the stourding how small a piece of their factories, their commercial advantages and their solid foundation, thus attracting the wealth. If is astounding how small a piece of land puffices for a family's support. This itea of little, tiny farms does away with the loneliness of American farm life. In fact, it is hard to say where the limits of the cities stop and the country commences, so closely are country commences, so closely are country commences, so closely are

cities, towns and villages interconnected.

"Another cesuit is the absence of the

Northern Ireland, he says, is a fair example of development of both a country and city through intensified farming. The intense cultivation of small areas has brought about a section filled with happy people and pros-perous cities. The development of industries in Belfast is material illustration of the successful combination, growth of city and country. The carefully developed small farm in the northern part of Ireland has proved the value of intensified cultivation.
