Showing Method of Removing and Replacing Spool Case

Sewing Machine Dept. 6th Floor 6th-Street Building

This Eldredge Two Spool Rotary Sewing Machine

Will Revolutionize Your Sewing

AND HERE ARE THE REASONS

No Bobbins to Wind! With the ordinary machine, it is necessary to spend at least one hour of a day's work in winding and changing bobbins. The average bobbin holds less than 50 yards of thread. The average spool holds 200 yards. Think of the time you save—and the labor!

You sew direct from two spools of thread. The lower spool fits in the spool case, which answers the purpose of a shuttle, while the other is placed on the spool pin, as usual.

You will not be annoyed by the lower thread running out unexpectedly in the middle of a seam. The amount of thread on the lower spool is indicated by the condition of the upper spool.

The Automatic Tension is a genuine time-saver. It produces a perfect stitch, without adjustment, on all classes of work. It saves the time necessary in changing tensions on ordinary machines.

This innovation in sewing machines—this triumph of the Twentieth Century—is uniquely simple. It is easy to understand and to operate, and you will soon become proficient in its use.
