WATER ORDINANCE A FRAUD.

The Daly water ordinance, on which the people are to vote next rented property to pay for water used by their tenants and to take their chance of being able to collect from he tenants. It is misleading in the fact that it provides: "No greater minimum than 50 cents per month shall be charged," when 50 cents is already the minimum, both for consumers who pay the flat rate and those who pay meter rates.

In practice, the number of consumers who pay the minimum flat rate is so small as to be of no consequence. Almost every dwelling has a sink, bath and a toilet, for which the flat rate is 75 cents. The impression there fore prevails that 75 cents is th minimum flat rate. The ordinance misleads many persons who pay this rate into the belief that, if the ordinance is adopted, they will secure a reduction to 50 cents. The fact is they will secure no reduction what-

SEVEN QUESTIONS ARE ANSWERED Mr. Mulkey Tells of Normal School Re. sults in Reply to Mr. Hodson.

PORTLAND, Oct. 23,- (To the Editor.)—C. W. Hodson in a letter to The Oregonian asks advocates of the Weston and Ashiand normal schools to answer seven questions deemed per-tinent to the issue of re-establishing these schools. Some of these questions I wish to answer, leaving others to persons with the records at hand.

1. What percentage of students attending these normal schools are residents of other states?

Answer: Less than one per cent, and these thereafter lived and wrought in Oregon.

Answer: About twenty per cent. But ven these were worth the effort, for even these were worth the they, too, were Oregonians.

3. What percentage of the students at-tending were residents of the city in which the school was located? Answer: About twelve per cent. But even these were worth while, for they were Oregonians and afterwards dispersed and taught (most of them) throughout the state.

4. What percentage of those attending graduated? Answer: About twenty-five per cent.
But no school's usefulness is to be
measured by its graduate output.
Every day in the schools bears its proportion of benefits.

2. What proportion of graduates secured license to teach?

Answer: Ninety-five per cent. Many more who did not graduate taught

7. What percentage of those securing licenses to teach followed the profession permanently?

son's questions I hear will follow from the records. Such answers as are here given come from some years' experience with the Ashland Normal School and are substantially correct. Now Mr. Hodson would whether these normal schools are local high schools. That phase of the

Every question Mr. Hodson asks might be huried against every normal school in every state of the Union. But every state save three has a larger normal school equipment than

west machine and prevent the addition of Smith to that machine, which has been systematically built up and acked with Camberlain and Weston.

It mays "Vote 325 no." Is not this an error? Should it not read, "Vote 323 no." It was a typographical error. The recommendation should have been "Vote 323 no."

7. What percentage licenses to teach followed the profession permanently?

Answer: At least 50 per cent of the men graduating followed teaching permanently and most others for ten years or more. Ninety per cent of the women graduating taught until called by death or marriage, and the normal school with all its alleged weaknesses would not curtail marriage and could not thwart death.
