boy in his uncie's care, but it had been a sad home. So the lad was very miserable. In this state of mind he determined to run away. Getting up at midnight, he crept downstairs and was soon on his way alone through the forest, with nothing but a bit of black brend in a sack on his back. Presently he met a bilnd man coming through the woods, trying to drive a few lean cattle. But the cows would stray off and the man was having a hard time to keep them with him.

of Baking A New Cakes Method Mrs. Nevada Briggs, the baking expert, says:

"There is just one way to make your cakes rise high and evenlygive them time to rise before a crust is formed and the batter is stiffened by cooking."

"If using a gas, gasoline or oil stove, light your oven when you put the cake in and keep the flame low until the cake has doubled in bulk; then increase the heat until it is evenly browned and will respond to the pressure of the finger. If using a coal or wood range, leave the oven door open until the cake is in; then turn on the drafts and by the time the oven is at baking temperature, the cake will have raised sufficiently."

For rich, moist, feathery cakes Mrs. Briggs always recommends

It is double acting and **sustains** the raise. You can open and close the oven door, turn the tin around in the oven or do anything else necessary, without any danger of making the cake fall.

Try your favorite cake next time with K C Baking Powder and see how much higher it will rise. Make it just as you always do, with the same quantity of baking powder. While K C is less expensive than the old fashstrength and it is guaranteed pure and healthful, Try a can and be convinced
