Stammering and Stuttering

Stammering and Stattering.

Most small children with defects of speech can be cured. If the defect is simple and the habit is not firmly established, the mother can cure better than anyone else.

Stammerers are unable to produce certain sounds or to correctly pronounce certain words. Lisping is a form of stammering. A stammerer may be deliberate in manner. The defect may, and usually does, not cause any self-consciousness. In fact, some children affect lisping, Many children who stammer have been led to believe that the speech fault is something of an accomplishment. The peculiar way of pronouncing words is imitated and terms of endearment are used in connection with the imitation. The net result is that the child is far from undertaking the effort needed to correct the fault.

Most cases of stammering and lisping can be cured by the mother. The method is simple. She must continually pronounce the words which the child inspronounce the words which the child inspronounce and have the effect in common with a policy of under cases and sallies when the child inspronounce and have the effect in common with a policy of under cases and sallies with the child inspronounce and have the effect of namering that it (would be) is an unneutral act for us to further in the same munitions to the sellies, cannot establish and pursue any domestic policy which had pursue any domestic policy which and pursue any d

by doing so. She may learn words which her child can pronounce cor-rectly, which words call for about the same operations in the speech organs as those which the child speaks incor-rectly. All of this is for the mother. In training the child the mother speaks correctly some troublesome words, and other related words, and the child repeats them.

Stuttering is a different matter. Stutterers can make the necessary sounds. The trouble is in forming the ounds into several-syllable words and into sentences. The seat of the trouble is the mind.

Stammerers and lispers are at their worst between 2 and 5 years of age. the mother can cure the average stutterer of his defect. Why? The need

There are cures for stuttering, though
some people do not get cured. Much depends on the mentality and the age of the

The following is from the new International Year Book: The event that precipitated the war of the nations was the assassination, June 28, 1914, of the Archduke Francis Ferdi nand, nephew of Emperor Francis Joseph and heir to the Hapsburg throne, ogether with his morganatic wife, the Duchess of Hohenburg, while on the Archduke's first official visit to Sara-

Wonderful If Visible. PORTLAND, Dec. 26 .- (To the Edior.)-Has the reader attended, at the beginning of hostilities, open to both sides and which is now closed to one concerts? Marvelous things transpire there. Not visible, all of them, to the natural eye, but more to the auditory

ense. When that orchestra plays through When that orcheitra plays through the compass of the scale, the air in the room is in a torrent of commotion, cut into every complexity of vibration. Grave tones mingling with shrill, soft with full and strong, fundamentals mingling in great overtones; the whole flooding the ears of the listeners, without confusion or discord.
