Gain in Cussing Lamented. Cussing is gaining in this country, said Billy, with the addition of a few as samples. "You'd think from the prevalence of cussing that it is part of the public school curriculum. A man would have to be pretly mean that would cuss his mother, or his father. Well, how much worse must the man be that cusses God. The man who cusses God can go to hell."

Declaring that he had as much respect for the man that held him up on the highway as the food baron, Sunday flayed those who hold up the prices of commodities in this hour.

"Here's what I believe," said Sunday. "There are no Democrats, Republicans of any other party, we'are all Ameri-

The fire, first discovered late yesterday, started in two places near the flume simultaneously, and many believe it to have been of incendiars origin. A number of young men assisted last night in fighting the flames, and they were thought to have been extinguished. After the fighters abandoned their work the strong wind evidently flanned into flame a smoulder-ling brand.

## Straightening the **Bookkeeping Curve**

At the first of every month comes a rush of work; the books must be closed; a trial balance taken; statements hustled into the mail; books reopened. During the last few days of each month comes another congestion, while statements are prepared and postings brought up to date."

If your bookkeepers work steadily during the middle of the month, extra help must be required to carry the "peak of the load"—there is twice as much to be done.

Under the old-fashioned pen-and-ink method it isn't possible to avoid this "peak" load. An accumulation of work must always be left till the end of the month.

The solution is to have each day's work done complete, with Elliott-Fisher Bookkeeping Machine. It is a business necessity.

Accounts are always in balance; statements are written

up at the same operation of posting the ledger; they are always complete and up to date. There is Nothing-To-Do-At-The-End-of-The Month-But-Mail-The-Statement

The peak load is cut down, and the work evenly distributed. Elliott-Fisher has been applied to practically all kinds of businesses and met all varieties of bookkeeping needs. Daily bills combined with monthly statements are easily handled; distribution done where desired; either skeleton or detailed ledger kept. Elliott-Fisher Bookkeeping Machines are always fitted to your work-not the work fitted to the machine.

One of our representatives will tell you how to get your statements out on time if you'll phone or write to the local Elliott-Fisher office, 305-307 Oregon Bldg., Fifth and Oak Sts.

In the Kendall Refining Company, Bradford, Pa., two Elliott-Fisher Bookkeeping Machines have cut out the peak load and straightened the curve. Here, in their own words, are the results obtained:

"We are able to accomplish with this system at least three times the work, without increasing our office force, and at the same time extend the Saturday half-holiday the entire year round, besides shortening the other workdays onehalf hour per day.

"Our books our always in balance and the trial balance at the end of the month takes only three to four hours, whereas it used to take us ten days. Frankly, I do not believe any firm employing more than one bookkeeper can afford to do without this machine."
