of cows and the scarcity of farm labor also helped to make the shortage in milk products noticeable.

While the report shows a slight increase in the production of butter and a decrease in the production of butter and a decrease in the production of cheese and condensed milk, it is not altogether indicative of the present status of the dairy industry, for the reason that the heavy dispersal of dairy cows occurred only in the last few months cored by the report and in the last months not included.

The increase in the butter output is accounted for by the closing of a number of cheese factories and condenseries, which made butter instead.

NEW YORK, Dec. 19.—Trading in securities during the greater part of today's ssion was dull to the point of stagnation the stock market itself being most often overshadowed by further persistent liquidation of liberty bonds.

This condition preceded a sudden transformation in the final hour, when heavy selling of high-grade shares, notably rails,

swept over the stock market, effecting ex-treme-reversals of 2 to 4 points. The outpouring of transportation issues was unaccompanied by any explanation other than a statement issued by Director-General McAdoo, which again emphasized the
