A DISCOVERY THAT BENEFITS MANKIND

Two discoveries have added greatly to human welfare.

In 1835 Newton originated the vacuum process for condensing milk with cane sugar to a semi-liquid form.

In 1883 Horlick at Racine, Wis., discovered how to reduce milk to a dry powder form with extract of malted grains, without cane sugar.

This product HORLICK named Malted Milk. (Name since copied by others.) Its nutritive value, digestibility and ease of preparation (by simply stirring in water) and the fact that it keeps in any climate, has proved of much value to mankind as an ideal food-drink from infancy to old age.

ST. JOHN'S, N. F., Aug. 13.—The prince of Wales was accorded an enthusiastic reception upon his arrival here at noon Tuesday.

Everywhere cheering crowds greeted him and he was welcomed by province and city officials at every turn from the water front to parliament.

The prince laid the cornerstone of the Methodist Episcopal college's new structure.

On the steps of parliament he presented lifesaving medals to 35 heroes who aided in rescuing the survivors of the wrecked liner Florizel off Cape Race last year.

The prince later inspected both houses of parliament and sat in the presiding officer's chair.

Later he played a round of golf at the country club.

The weather was ideal and shipping and public buildings were gay with bunting in honor of the distinguished guest.

The largest crowd in the history of the city cheered the prince enthusiastically.

At the Commercial Arch the prince received an address from the commercial community, read by the president, and especially noting the work of the fisher folk in defying the German submarines. The prince replied appropriately.

At the Colonial building the parliamentary address was read by the colonial secretary. Here the heads of both houses of the legislature presented the prince with an electric device for the illumination tonight.
