The difficulty in the past has been that the architects of the new and finer Portland wanted to do too much too quickly. They consulted their own symmetrical and fanciful ideals and ignored the actual condition. The hoary truth is that cities are not built in a day, and cannot be built over at all, except through gradual, sensible, and not

too costly measures. Just now there is a city-planning body which is seeking to solve some Portland's problems. It has been steadily at work for a year and there promise that it will get somewhere. Under a zoning system, it to find out both what is pest for the various sections and neighborhoods, and what can be done. It does not run counter to community sentiment, but seeks to heed it, as well as to persuade it to consider its own best interest by following some arranged plan of betterment. It would renovate, segre gate and build; and it would give to each locality in the form of buildings and other improvements that which it may be best fitted to have. So far insuperable difficulties; but the time is nearly here when it must go in for
