What it is-How made -Why white-

NUCOA is table butter. It displaces cow butter—and does it without a single apology. If it were less buttery than that which you have been brought up to call butter, it would fail utterly. It is a great big success. Our five churning plants have a daily capacity of 300,000 pounds. Just think of it! Enough butter to spread nine million slices of bread—liberally. Never let anyone tell you that Nucoa isn't butter. What else could it be when it butters all this bread every day?

Let us tell you how it is made. We import the meat of the coconut from Ceylon, Java and the Philippine Islands. This is crushed and refined into a cream white butter. It could not be finer. It does not contain a trace of water. It is just pure coconut butter. Highly refined, rich, peanut oil is added. This is just like olive oil in color and texture. The richness and mellowness of peanut oil makes it very valuable. These two products are churned with cultured milk that has first been pasteurized. When it leaves the churn it is worked and salted the same as creamery butter. The one secret is efficiency and care.

Nucoa is white because the Dairy Interests succeeded in passing a law that took from us the use of the very color that all cow butter contains. We supply this color free. Process of coloring simple and easy. It takes but a minute. Directions surround each print. Branded oleomargarine to satisfy an old Federal Law passed before Nucoa was made. Work with your Congressmen against these dis-
