Thinness Easily Overcome. (From "Health and Beauty")

Further evidence is being presented almost daily that a recent compound of new chemical elements combined in a tablet with hypophosphites is in reality proving a blessing to the abnormally thin men and women, for it can be demonstrated beyond doubt that a regular course of three or four months' treatment brings an increase in weight of from 10 to 30 pounds, with a decided improvement of health and color, too. For self administration the most popular form is to be found in three-grain hypo-nuclane tabletts, obtainable in scaled packages from the best apothecary shops, with full directions.—Adv.
