Oil and bituminous coal are the two chief .ems of raw materials used in the manufacture of artificial gas.

> Suppose they should cost so much that 1,166 artificial gas companies in the United States could no longer operate without huge losses.

> Suppose these companies were forced to close down their plants and to shut off the supply of gas for even a single day.)

What would happen?

Immediately the lives of more than fifty million persons in America who depend upon gas for cooking, heating, lighting, and industrial purposes would be vitally affected.

Their homes would be darkened at night. Their meals would be served uncooked or cold. Their rooms would be cheerless.

The bath would become an icy plunge. Laundry and kitchen work would be drudgery. And outside the home thousands of big industrial plants would be crippled.

Weigh these facts carefully and you will realize what a tremendous part artificial gas plays in modern civilization.

It is the very life blood of 4,600 of our most prosperous cities, towns and villages.
