# **GREATLY IMPROVED**

Crop of 19,500,000 Bushels Estimated by F. L. Kent.

### FAVORABLE JUNE WEATHER

Oats Also Benefited.

Oats Also Benefited.

Oats Also Benefited.

An improved condition since June 1 of all Oregon crops except fruit is a feature of the July crop report just issued by F.

L. Kent, field agent of the United States bureau of crop estimates. This generally improved condition is due largely to favorable June weather. A precipitation of cless to three inches fell over western Oregon, with general rainfall of less amount over other parts of the state. While temperatures were below normal during parts of June growing conditions on the whole of June, growing conditions on the whole

Winter wheat-Condition Improved since June 1 3 per cent, indicating a state crop e about two weeks late this season, beginning on the lighter lands probably about July 15. On the heavy lands of the principal wheat counties there are many fields Wasco, Sherman and Gilliam counties have

bushels. A considerable acreage of outs is always cut for hay, and this hay harvest is now (July 10) well under way in

state an increased acreage of corn, most of which is used for silo filling. The in-crease this year over last is reported as per cent. Except for the last few days, per Potatocs-The Oregon potato acreage appears to be about 96 per cent of the 1919 acreage. The condition of the crop Js re-ported as 98 per cent of normal, which ported as 08 per cent of normal, which should make up for the deficiency in acce-age, thus making state's crop about the same as a year ago. A similar condition applies to the United States estimates. The total acreage appears to be about 96 per cent of last year, but condition of the crop is such that an increase of about 30,000,000 bushels over the final

1919 estimates is indicated. part greatly under the production of a year ago. Apples probably will be about 65 per cent of a year ago, the commercial crop of the state being estimated at about 60 per cent of last year. Pears are also light this year, apparently not more than 30 or 65 per cent of a year ago. Cherries are almost a failure in some commercial districts, and probably will be less than 50 per cent of the 1919 production. Pruner se a crop not far from the produc-

Spring wheat—For three years past June weather has caused a marked decline in condition of apring wheat. This year condition improved during June, and the crop now givef promise of 4,500,000 hushels or more. In the western part of the state condition is generally reported as being close to the 100 per cent mark.

Outs—Outs, which for the most part are spring sown, were greatly benefited by the June rains. An improvement of 5 per cent to condition is reported, which indicates a total production of probably 13,250,000 bushels. A considerable acreage of outs allowed to the condition is reported, which indicates a total production of probably 13,250,000 bushels. A considerable acreage of outs allowed to the condition is reported, which indicates a total production of probably 13,250,000 bushels.
