Millions of Smiles

Now show beautiful teeth—this is why

Look at people's teeth when they smile. Many teeth are dingy and discolored. All one's attractions are marred by them.

You must combat film. Brushing does not clean teeth if it leaves the film. It removes some debris, but it does not end the teeth's great enemy.

Millions find that well-brushed teeth still discolor and decay. Tooth troubles have been constantly increasing. Now modern dental science finds the reason in a film.

How film ruins teeth. It is this film-coat that discolors, not the teeth. Film is the basis of tartar. It holds food substance which ferments and forms acids.

Five quick effects. Pepsodent brings five desired effects with every application. Some are at once apparent, and all soon show their benefits to teeth.

Few children escape. Children's teeth seem most susceptible to film-caused attacks. Very few young folks escape them. Dentists advise the use of Pepsodent from the day the first tooth appears.
