IN SPOKANE, WASHINGTON

With roads ranging from pavement to crushed and volcanic rock to sand and loam, the Inland Empire requires an excep-tional tire. It must withstand the demands

of greatly varying conditions.

The tread of a tire, to be successful in this territory, must be tough so it will not wear prematurely yet so soft that it will not "cut" or "chip"—a rare combination.

The side walls must be thick and of durable rubber stock to ride in ruts where need be.

The carcass must be unusually strong to stand up under the bruises of mountain These and other essential qualifications for the rendering of satisfactory tire service in your territory have been incorporated into the Savage Cord. That we have successfully overcome local road conditions with our tire is evidenced from the highly consistent and satisfactory service Savage Tires are giving in this and tributary

In Territorial Service

A corporation sending salesmen over severe country roads has received over 10,000 miles of uninterrupted service to date on the first set of Savage Cords installed. These tires are still in service and from appearances have traveled only one-third of

the mileage they are capable of.

We point with no particular pride to such individual records as 27,000 miles rendered

C Almost any tire will give satisfactory service under ideal conditions. Some makes will even render satisfactory service under certain adverse conditions. Certain makes of tires will perform best on long drives over pevements, other makes will show to better advantage on dirt highways—

by our Cord tire over mountain roads, although that mileage is remarkable con-sidering the type of service performed. These we class as exceptional cases. They do not necessarily portray the general con-sistency of Savage Tire performance that we are desirous of showing. In Stage Line Service

After comparing the performance of our product on his stages with the mileage previously secured from nearly every other so-called standard make of tire, an operator in your Idaho territory is using Savage Tires exclusively—getting better mileage and service than from any other tire used heretofore.

Operating eight stages and taxicabs be-tween Lewiston, Idaho, and Pomroy and Dayton, Washington, over roads composed mostly of rocks and ruts, Savage Tires are averaging 60% greater mileage than the highest previously secured from other

With the fixed purpose of manufacturing the best Cord tire on the market, our engineers incorporated into that product seventeen ourstanding constructional features. These make it a really remarkable tire. Some of these features, to be sure, are used in other good makes of tires but we know of no other tire that begins to

perform equally well-under every condition—on the short haul of the heavily ladened commercial car, on the heated roads of the sandy desert, over mud and stones of the land of forests or the broad dirt highways of the plains.

C. That we have accomplished our purpose is evident from the results users of Savage Tires are
