For Dainty People
For careful people—A new way to brush teeth

This is for people who want prettier teeth, cleaner, safer teeth. It has brought these results to millions, the world over.

It is fast displacing old and ineffective methods. Dentists everywhere are urging its adoption. In some fifty nations careful people use this method now.

Find out what it means to you and yours. There are few things more important.

The war on film
Dental science is conducting a worldwide war on film. This new method is the way employed.

Film is that viscous coat you feel. It clings to teeth, gets between the teeth and stays. It becomes discolored, then forms dingy coats. Tartar is based on film. That is why teeth lose their luster.

Film also holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay. Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea. Thus most tooth troubles are now traced to film.

two great film combatants were embodied in it. The name of that tooth paste is Pepsodent.

Two great mistakes
It was also found that old-type tooth pastes involved two great mistakes. They were due to soap and chalk. They decreased the starch digestant in the saliva. That is there to digest starch deposits which may otherwise ferment and form acids. They decreased the alkalinity of the saliva. That is there to neutralize the acids which cause decay.

Pepsodent
The New-Day Dentifrice
