BOWLING Bowling with Top Keglers

Marion Ladewig

Several factors contribute to good balance during the approach.

One of the more important is the extension of the left arm way from the body (illustration) This should become automatic.

It allows the bowler to counteract the weight of the ball on the right side.

Those who don't extend the left arm will probably sag to the right.

Here is your illustrated guide to every Strike and Spare-Shooting combination in Bowling!

Send for the booklet, "Strike and Spare Angles" by Don Carter and Marion Ladewig.

A copy's yours for 20¢ and a stamped, self-addressed envelope sent to Don Carter and Marion Ladewig, c/o this Observer.

PSU's

Institute

on aging

The Institute on Aging at Portland State University has been given \$3,000 by the Oregon State Programs on Aging to survey existing programs and services provided by agencies throughout the state for the elderly.

Before the state can continue with a plan to develop coordinated, comprehensive programs and services for the elderly, information on those presently existing must first be collected, according to Dr. John O'Brien, associate director of the institute and an ecologist.

Several students in PSU's two-year-old interdisciplinary-coast, will assist Dr. O'Brien over the next year in collecting and analyzing the information.

Dr. O'Brien also is chairman for one of the six state-level task forces currently exploring various issues and problems of the State's elderly for the State White House conference on Aging to be held in Salem May 3rd.

He and the members of his task force on "Present Programs and Services for the Aged" will hold public hearings in Salem April 12 to hear people's opinions on the problems in such programs and services as transportation, housing, health and recreation.

Based on the six task force hearings, priorities for the elderly will be established at the May 3rd State Conference and then presented at the 1971 White House Conference on Aging in Washington, D.C. in November.

This ingenious water recycling system will keep the Skookumchuck River running clean.

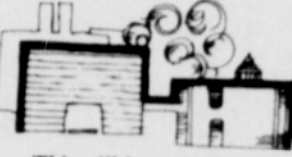

1 The Skookumchuck River. Clean. And fresh. And cool. And it'll stay that way after the new power plant near Centralia, Washington, goes into operation, because we've developed a "closed circuit" system for using its water.

The system starts here, ten miles upriver, at a dam built specially for the plant. This dam stores up surplus winter rains, which it will then release to supply the plant with the water it needs, while providing the city of Centralia with an additional two million gallons each day.

2 We'll pump what water the plant requires from the river into this holding pond, and then into the plant, where it will be used and re-used until it's evaporated. None will return to the Skookumchuck.

3 This will heat up the cooling water, so we'll transfer it to huge cooling towers outside the plant. After it drips through the towers and re-cools, we'll return it to the condenser to continue its job.

4 Some of the water will be heated in the boiler to produce the steam needed to generate electricity. Then we'll condense this steam back to water for re-use by circulating cool water around it.

5 To make the plant as efficient as possible, we'll use more water to wash the coal going into the plant, and flush out ashes from the furnace. The wash water, full of dirt, will be pumped to a settling pond for clarification and later re-use. The dirt, settled at the bottom of the pond, will be trucked to the mining site as land fill.

And that's it—our plan to keep the Skookumchuck clean. It's just one of the many ways we're working to keep our plant, and the air and land and water around it, clean. And to insure the livability of our area for the future while we do our basic job of providing our region with essential electric power.

Pacific Power

Where they make the electricity that makes things nicer for everybody.

The unsafe deposit box.

If you keep your valuables this way, you're risking them to all sorts of hazards. Fire. Theft. Vandalism. Just plain forgetfulness.

Let us safekeep your valuables for you—in a U. S. Bank safe deposit box. Then you'll know your deeds, titles, insurance policies, tax records, gems, etc. will be where nothing can happen to them.

Rent a safe deposit box. The rent's just pennies a day at any branch of United States National Bank of Oregon.
