Globetrotter tips

(The fabulous Harlem Globetrotters, who bring their basketball magic to Portland on Sunday, Jan. 7 at 2:00 p.m., have put together a series - "Basketball Tips From The Harlem Globetrotters" - to fulfill thousands of requests from their fans. Here is one installment of that special series.)
Shooting ability, like other fundamentals of basketball, is something that cannot be improved through practice. Let's start with your feet, which may sound funny, and end up with your eyes.
In shooting, keep your feet a comfortable distance apart, usually about the width of your shoulders is a good distance. Relax, and bend your knees slightly. The ball should be released off the fingertips and don't forget to follow through. You should end up with the palm of the shooting hand facing the basket.
Now let's get to the eyes. Aim is very important in shooting. Concentrate on where you want to shoot, whether you intend to use the backboard or shoot for the rim. Generally speaking, angle shots should be banked off the board. Try and aim for the front part of the rim, and shoot a soft shot. Many times the ball will then go in off the rim.
When shooting the jump shot, remember that it is not important to get very far off the ground. It is far more important to be able to get off your shot quickly and accurately. Very few of your top basketball players actually jump that high, it is far more important to shoot quickly.

PCC offers opportunity for all

Roger White at age 58 is a full-time student in Portland Community College's Machine Technology program. He is training for one of the many machinist jobs open in the Portland area. Roger was in the Air Force for 22 years and retired in 1959. He worked as a construction carpenter before learning soft tooling with Boeing in 1965. Like many other skilled laborers, Roger was out of a job when there was no longer a need for soft tooling. Job hunting efforts led to the State Employment Bureau where a counselor gave Roger tests which indicated an aptitude for machinist skills. Through the Manpower Development Training Act (MDTA) Roger was able to enter the machinist training program at Portland Community College. Roger White will finish his two year program this summer but may return next fall to develop additional skills before finding a job.
PCC's Machine Technology program offers job shop training, an opportunity for employed machinists to upgrade their skills, and retraining for students like Roger who can no longer find a job with present skills.
George Scott, Machine Technology instructor, says, "A machinist is an artist who takes a piece of steel and makes it into a product using machine processes as a sculptor would use a chisel." The machinist likes to work with his hands to produce a usable product.
Scott and fellow instructors Vincent Pelly and Louis Whitlatch bring a combination of 60 years of experience in the machinist trade to the students at Portland Community College. The program is designed for individual learning speeds and accomplishments, and prepares students for entry level employment in the machine trades industry. Instruction is given in varied machining processes, and students spend 25 hours per week in the machine shop and in related machine theory classes. Specialty courses are also offered on operation of the Tektronix Numerical Control Unit acquired by the college last year.
Scott says the job outlook for machinists is good. "We have job orders for qualified graduates which we can't fill, and I know all those graduates who wanted to work are now employed." Entry-level machinists may earn from \$3.50 to \$5.12 per hour.

Roger White at age 58 has returned to Portland Community College to retrain for a job as a machinist. PCC's Machine Technology program prepares students for all phases of the industry and waiting jobs.

THE FAMILY LAWYER

Lending Your Tools
Friendly Freddie had no qualms about lending an electric drill to his next door neighbor. But trouble followed fast. While the neighbor was using the drill, he suffered a bad shock. And he put the blame squarely on Freddie.
Suing later for damages, the neighbor said Freddie had no business lending him a tool that was dangerous. But Freddie convinced the court that he had been totally unaware of any defect in the drill.

Accordingly, the court held him not liable. The judge said that, inasmuch as Freddie was lending the drill "for free," he should not bear a heavy responsibility for its safety.
Most courts are reluctant to impose liability on the person who is generous enough to lend his tools or equipment. Still, if he actually knows of some hazard, he is usually obliged at least to give the borrower fair warning.
This is particularly true when the borrower is not likely to notice the danger himself. In another accident case, a home owner incurred legal liability by letting a 13-year-old boy use his power saw. Pointing out that the boy had no previous experience with power tools, the court said he was all too likely to get hurt.
On the other hand, the Janger may be so obvious that a warning would be superfluous. This was the ruling in a case involving a welding device that had an unguarded electric fan. The borrower, cut by the fan, filed suit for damages, claiming the lender should have warned him that the blades were exposed.
But the court dismissed his action, saying that the blades—in plain sight—were their own best warning to be careful. As one judge put it, there is no duty to warn the user that a knife will cut, that a match will burn, or that a hammer will smash a thumb.
"No one needs notice," said the judge, "of what he already knows."
