Ali Maow was a cook in Somalia when he came down with smallpox two years ago. When he recovered he became the last recorded case of variola minor (mild form of smallpox) in the world. Since his recovery, Ali Maow leads a normal life.

**SMALLPOX ERADICATED**

The U.S. Center for Disease Control located in Atlanta, Georgia, held a recent celebration for the part the organization played in the fight against smallpox. A systematic, intensive search for the disease in Africa for the past two years and the fact that no new cases had been reported to the World Health Organization led officials to declare that the war is over. Smallpox has been eradicated.

No one is sure when the last case of smallpox occurred in the United States. National reporting suggests that it was in 1949 during an outbreak of smallpox in the lower Rio Grande Valley, Texas.

Because smallpox took so many lives, it was once considered one of the world's most dreaded diseases. The disease, caused by a virus, often left the survivors with distinct disfiguring scars.

Dr. Donald Hopkins, Assistant Director of Operations at the Center for Disease Control, and a leader

in the fight against the disease, said that by early in 1980 there will be six laboratories in the world that have smallpox viruses. These laboratories, in Atlanta, Moscow, London, Tokyo, Peking, and Johannesburg, have been designated to keep the viruses for future research if this becomes necessary.

In Atlanta, Georgia, the laboratory, at the National Center for Disease Control, is one of the last refuges of the smallpox virus that has spread panic and killed millions of people for thousands of years. In drab freezers in the laboratory in Atlanta are more than 300 specimens of the bizarre and rancorous virus. Stored at temperatures of 94 degrees below zero are specimens from deadly outbreaks which occurred throughout the world in which almost half of the patients died.

The United States has almost enough vaccine stockpiled to protect 200,000 people. The vaccine is stored at Wyeth Laboratories in

Marietta, Pennsylvania. This stockpile will be maintained indefinitely.

Some health experts think it likely, though not completely proved, that the smallpox virus has been eliminated on earth. This is the first time that a major killer of mankind has been eliminated—a major achievement in medical science.

Dr. David J. Sencer, former director of CDC, said, "Anyone who has had an opportunity to participate in the smallpox eradication program will never forget the thrill of the achievement of eradication—to see that people can work together—all colors, all religions, and all political beliefs—to bring about complete destruction of a disease. It is a very thrilling thing to have been a part of this campaign. I don't think that anyone who has had anything to do with the program will ever forget it."
