PRODUCTION MANAGER

We are B-D Drake Willock, a company whose primary goal is superior quality. As a major division of Becton Dickinson, we are dedicated to producing kidney dialysis machines and related products.

Right now we are looking for a person to manage our manufacturing operations.

Perhaps you are an aggressive self-starter with good general business savvy and have a track record of selecting and developing good people; you understand the relationships between the material control functions and the production process and can demonstrate a record of making an MRP system work.

If so, we'd like you on the B-D Drake Willock team.

If selected, your background will include at least 4 years of management experience in electronics manufacturing; you will have manufacturing-engineering experience and a first hand record of successful development and utilization of productivity and quality measures. While a 4-year degree is a strong plus, it is not essential.

Do you want to become part of a hard working team where quality of workmanship extends to every facet of the business? Please send your resume to **John H. Wold, Director, Human Resources.**

Choosing a career

Choosing a career is one of the most important decisions in one's life. This choice should be made with the broadest possible information about the person and about the job market.

Preparing now for careers in the future requires not only an idea of the individual's interests, aptitudes and opportunities for training and education. The student also must have information about employment trends and industrial projections reaching far into the future.

The U.S. Bureau of Labor Statistics provides current information on labor statistics and projections.

Occupational Profile

Professional and technical workers: This category includes many highly-trained workers such as engineers, scientists, physicians, teachers, entertainers, and pilots.

Greater efforts in transportation, energy and environmental protection will contribute to a growth of demand for scientists, engineers and technicians. The medical and health profession is expected to grow. Professional workers to develop and expand the computer industry will be needed.

There will be less opportunity for teachers, artists, entertainers, airline pilots and oceanographers.

Managers and administrators: The number of self-employed business managers will decline as large corporations and chains dominate many areas of business.

The demand for employed managers will grow as firms increasingly depend on trained management specialists, especially in highly technical areas of operation.

Clerical workers: This group constitutes the largest occupational group and includes bank tellers, bookkeepers, cashiers, secretaries and typists.

New development in computers will greatly affect employment trends. As operations are computerized, employment for bookkeepers, file clerks and many office workers will decline, but the need for computer and peripheral equipment operators will increase. Technological innovations will not affect those jobs requiring a large amount of personal contact, like secretaries and receptionists.

Sales workers: Employment of this group is expected to grow by 27 percent. Most of the growth will be due to the expansion of retail trade.

Craft workers: This group includes a wide variety of skilled workers including carpenters, machinists, electricians, and mechanics. Employment in all construction trades is expected to grow, especially heavy equipment operators, electricians, plumbers and pipefitters. Among mechanics and repairers, growth will be in automobile repair, computers and office equipment, appliances and industrial machinery.

Operatives: Employment of operatives — production workers, assemblers, painters, welders — is tied to production of goods.

A slow-down in some manufacturing such as textiles, along with mechanization, will slow employment growth in this area.

Transportation operatives: Overall employment of drivers will increase, although some occupations such as switch-operators and bus drivers will decrease.

Non-farm laborers: Employment in this group is expected to grow only slowly, as machinery replaces manual labor.

Household service workers: Housekeepers, child care workers, and caretakers will decline. In spite of a rising demand for services, the lower wage and strenuous nature of this work makes it unattractive to many workers.

Service workers: Firefighters, janitors, cosmetologists, bartender, other fields will expand rapidly due to the rising demand for commercial cleaning services, protective services, and more frequent use of restaurants and beauty salons.

Farm workers: This group includes operators and laborers. Employment opportunities have declined for decades due to mechanization and greater productivity.
