

MAI NAME HEGARDT

Hitchcock Will Soon Act on Roseburg Land Office.

FULTON FAVORS NEW MAN

Secretary Will Act on Question at Boston and, if Hegardt is Satisfactory, Will Drop the Other Candidates.

OREGONIAN NEWS BUREAU, Washington, July 22.—W. Scott Smith, private secretary to Secretary Hitchcock, has gone to Boston to lay important pending matters before his chief. It is believed Mr. Smith took with him Senator Fulton's endorsement of E. B. Hegardt for Receiver of the Roseburg Land Office, as this is a matter to which the Secretary wishes to give his personal attention.

TAFT WILL KEEP CANAL

President Decides Against Transfer to Root's Department.

OSTON, N. Y., July 22.—President Roosevelt and his Secretary of State, Elihu Root, concluded their conference today, but absolutely nothing is disclosed concerning whatever decisions may have been reached.

GOOD PROGRESS AT KLAMATH

Water-Users Will Soon Clear Way to Beginning Construction.

OREGONIAN NEWS BUREAU, Washington, July 22.—The Reclamation Office today was advised that the Water-Users' Association of the Klamath project is making good progress in obtaining subscriptions of landowners, about 80 per cent of the lower project having been signed. There is much interest in this matter, and people generally are urging those who have not yet signed to do so at an early date in order that there shall be as little delay as possible in beginning actual construction by the Government.

JERRY SIMPSON VERY ILL

Ex-Populist Congressman in Critical Condition, Say Doctors.

ROSWELL, N. M., July 22.—The condition of Jerry Simpson, ex-Congressman from Kansas, is declared to be critical by the physicians in charge of his case. He has suffered a rupture of one of the main arteries near the heart and any violent motion of the body might cause instant death, but should nothing occur to cause the absolute breaking of the vessel about the blood vessel, he may recover. He is able to be dressed, but the doctors say he will be confined to his house for at least three months.

Lawyer and Client Arrested.

NEW YORK, July 22.—Cham S. Andrews, the lawyer who appeared for Dr. John A. Harris when the latter brought an action against two men whom he charged with wrongfully obtaining \$12,000 from him, was formally placed under arrest today. Dr. Harris also was arrested upon a warrant issued from the District Attorney's office at the same time. Andrews had intended to sail for Europe today when arrested. Dr. Harris and Harris were held for examination next Saturday, the former in \$500 and the latter in \$1000 bonds.

BROWNELL SELECTION GOOD

President Approves the Carey Act Scheme Near Umatilla.

OREGONIAN NEWS BUREAU, Washington, July 22.—President Roosevelt to-

HER GRAVE IS FOUND

Sacajawea Buried on Shoshone Reservation.

TRACED THROUGH HER SON

Major Baldwin Told by Basil He Was Sacajawea's Son and Her Body Lies in a Cemetery in Wyoming.

LANDER, Wyo., July 22.—(Special.)—From old-time residents here, information has been obtained which tends to establish almost beyond question that the body of Sacajawea, the Shoshone Indian woman, who acted as guide for Lewis and Clark in their great journey to the Pacific Coast just 180 years ago, lies buried in an unmarked grave near the Episcopal mission on the Shoshone reservation near here.

IS NOW FOREST SERVICE

Forestry Bureau Changes Name, but Not Its Functions.

WASHINGTON, July 22.—From July 1 the Bureau of Forestry is to be officially known as the Forest Service. The change was made by Congress last winter, when it provided for the Government work in forestry during the coming year, and signalled an important advance in the scope of that work. The actual control and administration of the National forest reserves, formerly under the charge of the Land Office of the Department of the Interior, is now in the hands of the Forest Service, the only branch of the public service possessed of the scientific and technical knowledge necessary for the enlightened care and use of the forests. This means that the reserves are to be made to yield to the people of the country the largest benefits which intelligent management can get out of them. Use, not reservation from use, is the essential purpose of the reserves exist—but use under such conditions as shall make their benefits permanent.

Wind Too Light to Sail.

DERVAL, Quebec, July 22.—With the Alexandra in the lead, the third race for the Seawannaka cup was called off at 6:26 tonight, the time limit having expired.

Rural Carrier at McMinnville.

OREGONIAN NEWS BUREAU, Washington, July 22.—Charles A. Kelley has been appointed regular, Harvey W. Kelley, substitute, rural carrier, route 4, at McMinnville, Or.

Physical Superiority of Jews.

Harper's Weekly. Comparisons of Jews with other people in respect to their vitality are made from all quarters, and always make for discouragement of the other people in the competition. A new one comes to hand by way of the London Lancet, which publishes the result of an investigation of the physical condition of children living in the slums of Leeds. In every case, the Jewish children showed a marked superiority in height, weight, and vitality. The average of 3000 children similarly situated as to age, poverty, character, and residence. The little 5-year-old Jews were three pounds heavier and two inches taller than the Gentile children of like age. At ten, they were six and a quarter pounds heavier and two and half inches taller. At 12, seven pounds heavier and one and a quarter inches taller. Jewish bones and teeth were better, and the Lancet notes that the nasal chamber was larger in Jewish children, and that they were remarkably free from adenoids. The characteristic Jewish nose, then, is not without some substantial advantages. The Jewish mothers, it seems, get better care before their children were born and had more milk for their babies, and after weaning, the young Jew children were better and more sensibly fed than the Gentile children.

EMERSON NEW CHAMPION

Cincinnati Man Captures Western Tennis Tournament.

CHICAGO, July 22.—Nate Emerson, of Cincinnati, was victorious today in the finals of the Western championship tennis tournament, defeating L. H. Waldner, 6-4, 6-2, 1-4, 6-4.

Higgins Declares the San Francisco Fugitive Is Attempting to Mislead Court in Statement Regarding Extradition.

VICTORIA, B. C., July 22.—Today George D. Collins, fighting extradition for perjury before Judge Lammpan, applied to the Judge at the conclusion of the sitting for further liberty pending the decision of the court. He asked that he be not confined at night in the City Jail.

OREGON BOY GOES WITH NORTH POLE EXPEDITION.

SILVERTON, Or., July 22.—(Special.)—Dr. Louis J. Wolf, who goes as surgeon with Peary's North Pole expedition, was born in Independence, Polk County, Or. He is 28 years of age. His parents moved to Silvertown, Or., 20 years ago, where they still reside.

Finals in the woman's tournament, defeating Miss Carrie Neely, of Chicago, 6-4, 6-2.

As Miss May Sutton, of California, who won the championship last year, is not present to defend her title, Miss McAtee's victory in the finals makes her the champion.

A HARD ROW

And a long pull describes the pathway of a woman afflicted with female weakness unless she is under the care of a doctor who has had successful experience in the treatment of such cases or else has found the right remedy which can be safely used independently of the doctor.

Forty years ago, Dr. R. V. Pierce found that women were being grossly mis-treated, and he determined to devote himself to study and research till he found the real cause of their suffering and a proper remedy for it.

He found it, and dug from Nature's Laboratory, the earth, Nature's remedies for woman's weakness and ailments. He found in Lady's Slipper root, Black Cohosh root, Uplown root, Blue Cohosh root and Golden Seal root, the required ingredients.

The essential virtues of these he extracted, combined and preserved by his own peculiar non-alcoholic, glyceric processes, and the compound is now known the world over, as Dr. Pierce's Favorite Prescription.

"The bearing of corsets too tight seemed to have brought on an abdominal pressure, resulting in ligamentous and nodding in the back, which troubled me until I was not fit to walk, and at times could hardly stand," writes Mrs. Beverly Sturges, of 15 Fulton St., San Francisco, Cal. "A neighbor advised me to try Dr. Pierce's Favorite Prescription. I felt much better. Improvement went steadily on, and within four months I was able to walk, and in six months I was as well as perfectly well and strong, and extremely grateful to you for your blessed remedy."

A Great Doctor Book Free.—Send 21 one-cent stamps to Dr. R. V. Pierce, Buffalo, N. Y., to cover mailing and he will send you a free copy of his 1008-page Common Sense Medical Adviser, paper-covered, cloth-covered 31 stamps.

Dr. Pierce's Pleasant Pellets are the best and safest laxative for the use of delicate women.

Honda's experiments, says that in all these cases we may conclude that the level of the water in wells depends on the atmospheric and the subterranean pressure.

\$8750 for a "Richard III."

A perfect 1865 copy of the fourth quarto edition of Shakespeare's "Tragedy of King Richard the Third" was recently sold in London for \$8750 to A. Jackson. It is understood that it will go to America. The book was printed in 1865 by Thomas Creedy and was sold by Mathey E. Lawe, "Dwelling in Pauls Church Yard at the Sign of the Fox, near St. Austin's gate." It consists of 16 leaves. It is believed that only two other copies of this edition exist. One is in the British Museum and the other was sold by Mr. Lilly to Mr. Halliwell, afterwards Halliwell Phillips, and is now in the Bodleian Library at Oxford. The example sold is of peculiar interest from the fact that in five places a contemporary autograph of "William Penn" is found. The autograph is that of the celebrated Admiral, the father of the founder of Pennsylvania.

Cherries were first brought into Europe from Krasant on the Black sea, by Lucullus about the year 70 B. C.

Public Opinion.

Some interesting relations between the level of water wells near the seacoast and the height of tides are shown in an article in the Debata of Paris. This article relates to the observations recently concluded by Dr. Honda, of the University of Tokio, in reference to the level of water in wells at some distance from the seacoast. The first well observed by Dr. Honda was at a distance of four miles from the sea. It had a depth of 100 feet and the level of the water was about ten feet under the ground level, which itself was about 50 feet above the sea. The experiments lasted for several months, and it was found that there was a remarkable concordance between the daily variations in the level of the well and the level of the tides in the Gulf of Tokio. The highest point in the well water corresponded to high tide in the Gulf. Further, the level of the water was lowered with an elevation of barometric pressure. Dr. Honda then examined the wells of Negishi, situated only about a mile from the sea and having a depth of 100 feet. Here the daily variations in the level of the water were 10 centimeters. In the wells at Yoshiwara the variation was from eight to 11 centimeters. M. de Parville, in discussing M.

The experiments lasted for several months, and it was found that there was a remarkable concordance between the daily variations in the level of the well and the level of the tides in the Gulf of Tokio. The highest point in the well water corresponded to high tide in the Gulf. Further, the level of the water was lowered with an elevation of barometric pressure. Dr. Honda then examined the wells of Negishi, situated only about a mile from the sea and having a depth of 100 feet. Here the daily variations in the level of the water were 10 centimeters. In the wells at Yoshiwara the variation was from eight to 11 centimeters. M. de Parville, in discussing M.

Exchange.

Some interesting relations between the level of water wells near the seacoast and the height of tides are shown in an article in the Debata of Paris. This article relates to the observations recently concluded by Dr. Honda, of the University of Tokio, in reference to the level of water in wells at some distance from the seacoast. The first well observed by Dr. Honda was at a distance of four miles from the sea. It had a depth of 100 feet and the level of the water was about ten feet under the ground level, which itself was about 50 feet above the sea. The experiments lasted for several months, and it was found that there was a remarkable concordance between the daily variations in the level of the well and the level of the tides in the Gulf of Tokio. The highest point in the well water corresponded to high tide in the Gulf. Further, the level of the water was lowered with an elevation of barometric pressure. Dr. Honda then examined the wells of Negishi, situated only about a mile from the sea and having a depth of 100 feet. Here the daily variations in the level of the water were 10 centimeters. In the wells at Yoshiwara the variation was from eight to 11 centimeters. M. de Parville, in discussing M.
