

BUCK'S HOT-BLAST HEATERS

Now on Display
in Our Stove Dept.

Now is the time for consideration regarding the heating of your home during the coming season. For those in need of a heater, we would like to have you come in and look at this most wonderful and economical of all heaters—"Buck's Hot Blast." We know that after the many exclusive features of this line have been explained to you, you will be just as enthusiastic as we are. You will, first of all, be impressed with the handsome appearance and perfect finish of this display and a satisfactory selection as to size can surely be made from this extensive and modern line.

Thirty-eight per cent of the heating power in soft coal is absolutely lost in ordinary heaters by being allowed to pass through the chimney in such form as gas, smoke and soot. In the "Buck's Hot Blast" all these most necessary elements are saved by being consumed as fuel, thus showing how this modern heater will, in time, pay for itself.

BUCK'S The True Hot-Blast Principle

The above represents the true "Hot Blast" principle as contained in Buck's Heaters. This shows the "Hot Blast" ring of Buck's, and fully illustrates how the cold air is drawn from the floor into the stove, thus inducing a constant circulation of air in the room, and insuring against dead air in the home.
