For the Man Who Works at a Desk

Not Doctors, but the Right Kind of Food Is What He Needs If He Would Keep His Health,

You work at a desk and you are abut up in an office all day long, your brain overworked, your body absolutely idle. You get "out of sorts" and your meals don't please you and what you eat doesn't agree with you.

We want to give you some inside information.

don't please you and what you eat doesn't agree with you.

We want to give you some inside information.

Maybe you think you are sick, but you aren't. You need one of two things—exercise or better food.

It may be impossible for you to get the exercise. It's the easiest thing in the world to get the right kind of food. Just ask your grocer for Malta-Vita, the famous whole wheat food. Then eat it at least once a day-for breakfast—with cream or fruit. It will strengthen and refresh your body and mind and fit you for the day's work, and you will be glad we told you about it.

Every nutritive element of the best white wheat' grown is found in Malta-Vita. This famous food is the whole of the wheat thoroughly steamed and cooked in absolute purity and mixed with the finest malt extract that was ever made, the finest richest, strongest food in the world. You understand, of course, that the cooking and steaming of the wheat gelatinizes its starch into Malta-vita its gelatinizes its starch into Malta-o-malt sugar. Maltose is great food, and the weakest stomach digests and assimilates it without effort. Physicians recommend it and Malta-Vita is rich in it. The malted wheat having been rolled into little flakes, is baked under such intense heat that when it comes from the great ovons, every flake is crisp, brown Malta-Vita—the most delicious food in the world. Always ready to eat.

A perfect breakfast is impossible without Malta-Vita and it's good three times a day. All grocers sell it. Now 10 cents per package.

Raising Pearls for Market.

Technical World Magazine. The systematic culture of fresh-water The systematic culture of fresh-water pearls may easily become an important industry in the United States, as the mollusks from which they are taken are very abundant in our lakes and rivers. The Misstappi basin, especially, teems with them, presenting many forms which differ from those of the Atlantic watershed and other parts of the world. The methods of culture are exceedingly simple, as it is necessary only to open slightly the shell and insert a very small, transparent

glass head, putting it between the mantle and the shell. Great care must be taken to avoid injury to the little animal; and in opening the shell a thin, flat, iron tool, with a wooden handle and a hent point, should be used; a knife might answer for this purpose. When the point has been inserted, it is turned around to an angle of about 10 degrees, the shell being thus partially opened without injury to the life within. After treatment, it must be returned to the water for a year or two, while the process of incrustation goes on.
