

THE FUN IS OVER

You Now Will Have Time to Settle Down and Have Your Teeth Attended to

DR. B. E. WRIGHT.

Crowds of out-of-town people visited our office last week and combined business with pleasure. We had customers from all parts of the Northwest.

City people can now come with the full assurance of receiving prompt attention. Missing teeth supplied without plates and all of the most modern work.

Carnivals may come and Carnivals may go, but we always retain drawing power. Painless Extractions.

LIGHTS IMPROVED, REPLIES JOSSELYN

Head of Power Company Answers Mayor Lane's Criticism of Service.

GIVES RESULTS OF TESTS

Arc Lamps Now Used in City Streets Said to Be 69 Per Cent Stronger in Candle-Power Than the Old Type.

That the city is getting better street lights, which give more candle-power than ever before in its history, notwithstanding the contention of the Mayor and Executive Board that the candle-power has less than under the old lighting system, is the assertion of President Josselyn, of the Portland Light Association, who has just returned from Chicago with actual figures that were presented along this same line at the recent convention of the National Electric Light Association, which met in Chicago recently.

The figures President Josselyn quotes were arrived at after the most careful tests of arc lights in the various American cities by means of the photometer, an instrument for measuring the candle-power of electric lights. The results from 150 observations were shown at this convention, and the practical nature of the observations and their great extensiveness make them of much value.

Hard to Measure Power.

"In the old days it was very difficult to measure the candle-power of electric lights," says President Josselyn, "and the imagination supplied the vacancy left by the lack of agreement between the measurements of different observers. Because of this type of open arc lamp was found occasionally to approach 2000 candles in the most favored direction, with the best of attention in the laboratory. It was unfortunately named and classified as a lamp which consumed 450 watts at terminals. As a matter of fact, it was agreed at this convention that in the horizontal position along the street, these lamps gave only about 350 candle-power. They poured the light into a ring almost immediately underneath them, but they were very weak in the direction along the street where they were most needed by pedestrians and drivers."

Basis of Present Tests.

"The 450-watt rating was rendered useless in time, because of the fact that better lamps were developed that gave more candle-power along the street, while at the same time they consumed less than the required 450 watts. In 1906 a committee was named by the association to reconsider the whole question, and it recommended that the candle-power rating of lamps be abandoned and replaced by a rating of normal illumination at a distance along the street of from 200 to 300 feet from beneath the lamp."

"In speaking on the report rendered at the Chicago convention, the Electric World, in its issue of May 29, says: 'The observations show that the normal illumination at 350 feet from beneath the lamp tested reached as high as 0.012 foot-candle in particular tests of the magnetite lamp, corresponding to 750 candles in the lamp, down to as low as 0.002 foot-candle in particular tests of the 3.6-ampere direct current series open arc lamps, corresponding to 125 candles—the same type of lamp that had an original rating of 2000 candles. Average values reported were equivalent to 575 candle-power for the magnetite lamp, 430 candle-power for the 3.6-ampere direct current series enclosed carbon lamp, and 340 candle-power for the 3.6-ampere direct current series open carbon lamp. Had early light photography been developed earlier the lamps then used would not have been named 2000 candles.'

ARTS AND CRAFTS FIGHTING UGLINESS

AMERICAN ARMY LIFE.

Interesting New Book by Mrs. Ellen McGowan Biddle.

The Oregonian has been favored with a copy of "Reminiscences of a Soldier's Wife," written by Mrs. Ellen McGowan Biddle, wife of Brigadier-General Biddle, U. S. A., retired. The book is a most intimate view of army life and it is known in inner circles in this country, and so social and kindly is the descriptive style used that it almost seems that instead of meeting these distinguished Americans within the covers of this book, you were actually meeting them in Mrs. Biddle's drawing-room. Her husband was a brave officer in the Civil War, and he was also actively engaged in the various Indian campaigns in the West. Mrs. Biddle belongs to a well-known American military family. Her great-grandfather, William Butler, was with Washington at Braddock's defeat; her father gave willing service to his country for 50 years, and her husband, brother and son have also been conspicuous in army life. Scattered pages more closely, there's an artistic atmosphere about the book, because it details the interesting experiences of an American woman of gentle birth and breeding. The book is made plain to those who attended the exhibition which has been in progress at the art museum for the few weeks last past. It is the first one yet attempted by the local society but it shows little evidence of being an experiment. The variety of it is an agreeable surprise, for it covers a wide range of the crystalline efforts of trained hands and appreciative brains. It is a source of considerable satisfaction to know that much of the work was done by our own people. The portraits of Mrs. Hume, who has probably done more for the cause locally than any other, I saw the exhibit and learned something of what it means.

Looks With Suspicion on Caretaker

Japanese Cook Disapproves Habits of Man Left to Conduct Household During Absence of Family.

A LOCAL newspaper man who kept a house for friends while the family visited San Francisco and welcomed the Atlantic fleet is laboring under some embarrassments because of strained relations between himself and the Japanese cook. He kept house all right, but the cook looked upon him with suspicion, and finally refused to prepare his meals. He thereupon offered the cook \$2 if he would get his breakfasts during the week that would intervene before the return of the householders.

The newspaper man kept most unholily hours, and this vexed the cook. He came home at any hour of the night or early morning, and one night he brought home a brother of the newspaper craft to spend the night. Thereupon the Jap refused to cook and the \$2 offer followed. Besides, a girl called the newspaper man up one day by telephone, and this annoyed the Oriental still more.

Upon the return of the family the newspaper man was explaining at dinner how nicely he got along with the Jap cook, and how smoothly the wheels had been kept going during the owners' absence. When desert was brought in the son of Nippon, with a flourish, laid a huge note on the newspaper man's plate and withdrew.

The newspaper man had misgivings, but tried to look cheerful, and sought to smuggle the billet into his pocket unobserved. But the daughter, with her curiosity aroused, asked why he carried on a correspondence with the cook. Assuming indifference, which he was far from feeling, he scribbled over the note to the girl, who read it aloud. It bore the following legend:

"A. C. K., Honorable Sir: Ten days I worked for you. I think you are forgetful. \$2.50 for ten days work."

"OYAMA, the cook."

California Town Scorched.

OAKLAND, Cal., June 6.—A big fire raged in Elsie, Contra Costa County, this afternoon. The fire was extinguished after it destroyed the following buildings and contents: Town Hall, Foresters' hall, Murphy's Hotel, J. Shea's saloon, John Collin's saloon and residence and four dwellings. Loss \$40,000.

Devoted Few in Portland Working for the Success of the Beautiful.

EXHIBITS SHOW VARIETY

Efforts of the Local Society Extend to Various Mediums for Handicraft—Influence of Movement on Morals of Society.

BY ARTHUR A. GREENE
A devoted few cultured men and women are fighting the devil of ugliness here in Portland through the agency of the society of Arts and Crafts. They are making progress, too, in the work of leading the public taste toward the gods of the good and the true and the beautiful. The excellence of their work and its results is made plain to those who attended the exhibition which has been in progress at the art museum for the few weeks last past. It is the first one yet attempted by the local society but it shows little evidence of being an experiment. The variety of it is an agreeable surprise, for it covers a wide range of the crystalline efforts of trained hands and appreciative brains. It is a source of considerable satisfaction to know that much of the work was done by our own people. The portraits of Mrs. Hume, who has probably done more for the cause locally than any other, I saw the exhibit and learned something of what it means.

Museum Gets Du Chailu Sledge.

NEW YORK, June 6.—The sledge used by Paul Du Chailu, the writer and explorer, in his explorations of Lapland, which he described in his "Land of the Midnight Sun," has been presented to the American Museum of Natural History.

WORK OF TRAIN-WRECKERS

SALT LAKE OVERLAND DITCHED NEAR HIGH GROVE, CAL.
RIVERSIDE, Cal., June 6.—What is believed to have been an attempt to wreck the Salt Lake Overland train resulted in the ditching of a Southern Pacific switch engine at Grand Terrace Flag Station near High Grove at an early hour today. The engine was hurled from the rails, but the engineer and fireman escaped by jumping.

It was found that the spikes were missing from the rails on both sides of the track, which was torn up for rods by the switch engine. A crowbar was found near the scene.

Tutulla to Relieve Captain C. B. T. Moore, U. S. N.

OLYMPIA, Wash., June 6.—The yacht Shark arrived in Pago-Pago on the morning of May 3, the captain-author, Jack London, and all members of the party being well. The United States steamer Annapolis leaves here tomorrow for Fiji, where the new Governor of Tutulla, Captain Parker, U. S. N., will embark and come to Tutulla to relieve Captain C. B. T. Moore, U. S. N.

Jack London Reaches Samoa.

TUTULLA, Samoa, May 4, via San Francisco, June 6.—The yacht Shark arrived in Pago-Pago on the morning of May 3, the captain-author, Jack London, and all members of the party being well. The United States steamer Annapolis leaves here tomorrow for Fiji, where the new Governor of Tutulla, Captain Parker, U. S. N., will embark and come to Tutulla to relieve Captain C. B. T. Moore, U. S. N.

MALLEABLE IRON AND STEEL
The "Stay Satisfactory" Range

The picture shows the Monarch Range, built to burn wood, coal or gas. We can furnish three styles of gas attachments with ranges, or to fit Monarch Ranges that are already in use. Malleable iron and steel are the materials used in constructing Monarch Ranges. All joints, seams and openings are riveted air-tight, and will never come loose.

Monarch

COOK WITH GAS

MALLEABLE
The "Stay Satisfactory" Range

There are at least six improvements on the Monarch that are not found on any other range. No other range has any improvement that is not shown on the Monarch.

The only reason why other ranges are sold is because people do not know about the Monarch, or do not realize that the best is the cheapest.

Go-Carts

Small Folding Carts, steel construction \$1.69
Go-Carts, folding, with 10-in. steel wheels \$2.50
Folding Go-Carts with rubber tires on wheels, reclining backs and adjustable dash. \$3.50
Folding Carts with rubber tires, 10-in. wheels, red back and dash, adjustable and reclining with parasol. \$4.95
Collapsible Go-Carts as illustrated; the simplest to work and the most durable construction \$7.85
Collapsible Go-Carts with folding hoods, complete \$9.85

Buy Hammocks Here

Because prices are reasonable, styles the latest and quality the best. Close twill weave hammocks, stripe effects, continuous strutting \$1.70
Canvas weaves in jaquard design, with deep valance \$1.95

Price List of Gas Goods
