High-class interior decoration OF THE Home

Wall Papers At no time in the past has so much attention and study been given to the producing of artistic and dependable wall decorations in fabrics and papers. From Austria, Germany, England and Japan are imported the most popular and pleasing effects, where originate the color schemes and designs found in the newest woven fabrics—floor-coverings, upholstery fabrics and window and door hangings.

Our German and Austrian Tekko wall decorations produced in paper are perfect damask effects, shown in fourteen different tints and twenty-two designs—a wall decoration having no equal in laying a foundation necessary to produce the most pleasing results.

Where plain colors are desired, the English silk fibers are far superior to tints, as they are fast in color and have more depth.

We are showing English chintz and cretonne effects in foreign wall papers that are most pleasing for sleeping-rooms, also novel panel and floral cretonne schemes.

Library, hall and dining-room leather effects in hand-block designs, also hand-block friezes in all widths.

Lace Curtains Owing to the various sizes of windows in modern homes, we import our nets, lace edgings, insertions and ornaments, and make to order laces to fit exactly the proportions of each window in the same pattern. These nets and laces are in the white, ivory and Arabian tints.

Overhangings and Portieres We show an endless variety of fabrics for these decorations in silk, wool and cotton; velvets and velours; cretonnes and English prints; French shadows.

Buck's Ranges embody many special features in construction, design and finish, and their superior cooking and baking qualities have placed them in the front rank of modern ranges. The sanitary white enameled oven of the Buck's Range enables it to be cleaned like a china dish. The top of the range and the bottom of the oven are constructed so as to be practically non-warping. The range body is built of one piece of heavy-grade polished blue steel, backed by heavy asbestos lining, and all joints are made airtight with asbestos cement, which becomes harder than iron.
