

MEN OF SMALL INCOME

AND WOMEN WHO WANT TO HELP THEIR HUSBANDS SAVE

We realize that for every man of wealth there's a thousand sons of toil—for every millionaire's "brown stone front" there are thousands of humble abodes of salaried men. That's why we lend every energy to the service of salaried people—to those who delight in saving money. We want your trade—if you are a man of ordinary means and want to get the most for your hard-earned dollars. We want to save you money—save you every dollar we can. We're dead in earnest in this—thoroughly sincere. We claim to undersell, and we're making good. We have no rent to pay, that's why we sell for less

DO YOUR KITCHEN WORK THE EASY WAY

If you think the Hoosier Cabinet is just a miscellaneous collection of drawers and cupboards, you are mistaken. It is more than that—it is a saver of kitchen work and it doesn't cost any more than the ordinary cabinet. Come in and let us show you the Hoosier way of doing kitchen work—it's an easy way.

MALARIA DEFEATED BY QUININE CANDY

Italian Scientific Society Cuts Death Rate From 21,000 to 4000 Cases.

DR. OSLER TELLS OF FIGHT

American Physician Makes Report on Methods of Italians in Putting End to Plague of Campanian Marshes.

ROME, April 10.—(Special).—Dr. William Osler, who has been sojourning here, has written an elaborate article on malaria, in which he says:

"We owe much to the Italians for their contributions to our knowledge of the cause of malaria. Laveran's great discovery was promptly followed by Marchiafava and Celli and Golgi, and it was through their writings that we obtained the fullest details of the nature and structure of the malarial parasite. As an old student of this disease, and deeply interested in the practical problems of its prevention, one of my first visits to Rome was to the laboratories of pathology and of hygiene, to find out from Directors Marchiafava and Celli, the progress of the battle. It was not enough to know the cause, we had to know how it worked before effective measures could be taken, and the demonstration by Ross of the transmission of the disease by the mosquito at once put malaria on the list of easily preventable diseases. Just ten years ago the Italian Society for the Study of Malaria was founded, and I was able to get a full report of the work."

"In Professor Celli's lecture-room hangs the mortality chart of Italy for the past 20 years. In 1887 malaria ranked with tuberculosis, pneumonia and the intestinal disorders of children as one of the great infections, killing in that year 21,032 persons. The chart shows a gradual reduction in the death rate, and in 1906 only 4871 persons died of the disease, and in 1907, 4160. This remarkable result has been very largely due to the sanitary measures introduced by the Italian society. It has long been known that malaria disappears 'spontaneously.' The Fen country is now healthy, parts of Canada, about Lakes Ontario and Erie, which were formerly hotbeds of the disease, are now free. This cannot be attributed altogether to cultivation and drainage. I know places on the shores of the lakes just mentioned in which the conditions today are identical with those which I remember as a boy."

Quinine Is Cure.

"The Desjardin Canal Marsh, at the extreme western end of Lake Ontario, was a well-known focus of the disease. The marsh remains, the mosquitoes are there; but a case of malaria is almost as rare as in England. The disappearance is largely due to the free use of quinine. The settlers early recognized the importance of the fact that malaria was a disease liable to recur, and it became a common practice to take 'Peruvian bark' every Spring and Autumn for a year or two after an attack. This is a point in prophylaxis which the work of the Italian society has brought into prominence. For this purpose it has promoted and defended legislation for the gratuitous distribution of quinine to the poor and to all workers in malarial localities."

"In order to render possible the prophylaxis and to prolong the treatment, it has prepared the quinine in its most agreeable form—namely, that of comfits and chocolates, the latter containing tannate of quinine, which has little taste, and is better tolerated by children."

"The results have been that since 1902, when the law on state quinine was promulgated, while the consumption of quinine has been yearly increasing, the mortality from malaria has diminished from about 15,000 to about 4000 yearly; and in the army, Custom-House offices, and in some communes where the new laws have been better applied, the morbidity from malaria has greatly diminished."

"By those measures, and by means of the agricultural and agrarian transformation of the land and the destruction of mosquitoes, Italy may be freed from the scourge."

Malaria as Example.

"Malaria illustrates stages through which so many of the great discoveries in medicine have had to pass. At first a period of doubt that the actual germ had been discovered seemed too good news to be true, and for 18 years or more there was much, and perhaps justifiable, skepticism. Except for the great help in diagnosis, we did not get much further until 1888, when the experiments of Ross demonstrated the truth of the old suggestion of Lancisi (revived by King and Manson) that the disease was transmitted by the mosquito—the practical application of the knowledge of the cause and the method of its action. The anti-malarial crusades initiated by Ross have had an extraordinary success, and nowhere more than in Italy, in the hands of the National Society, to whose good work it is a pleasure to call attention."

"It would be hard to name any single event of the nineteenth century of greater practical importance to the race than the discovery of Laveran. In the words of Colonel Gorgas, it has made the tropics habitable by white men. The Panama Canal zone is an astounding witness to the success of modern sanitary measures against malaria. The monthly reports of Colonel Gorgas give a death rate (among nearly 50,000 work-people) lower than that of any large city—it has been as low as 12 per 1000. And let us not forget that humanity owes this triumph to the men who introduced experiment into medicine, to the Harveys, the Hunters, the Majendies, and the Claude Bernards—the arch-vivisectionists whom it has become fashionable to abuse—and who have thus enabled us to wring from nature what Harvey calls 'her closest secrets.'"

Seattle Headquarters July 1.

WASHINGTON, April 10.—Postmaster-General Hitchcock has signed an order creating, on July 1 next, the 13th division of the Railway Mail Service, with headquarters at Seattle, Wash. The new division includes Montana, Idaho, Oregon, Washington and Alaska. An additional superintendent and assistant superintendent will be appointed. The readjustment particularly gives Alaska headquarters in Seattle, instead of San Francisco.
