**"Sanitary" Refrigerators**

embody in their construction features that are most essential, both from an economical and sanitary standpoint. The "Sanitary" system is one of common-sense simplicity, fresh air entering intake on one side and, after circulating through ice and provision chambers, is expelled through outlet on opposite side. By this means the refrigerator is being continually supplied with fresh pure air without doors being opened, and contamination is impossible. Several styles and sizes in these modern refrigerators are shown in the Basement Dept. Priced from **\$18.00** up.
