LOSTINE CHURCH HONORED

Rededication Exercises of Union Organization Are Held.
LOSTINE, Or., Oct. 19.—(Special).—The Union church here was rededicated on Sunday with services participated in by several ministers from other points in the state. Dr. S. S. Holt, of Portland, delivered the chief address at the morning dedicatory service. Rev. B. F. Harper, formerly well known in Walla Walla County, also assisted the pastor, Rev. I. B. Self, and preached in the evening. Rev. I. G. Knotts, of Albany, and Rev. C. W. Higgins, of Gold Beach, were also present. Three members were added to the roll of the congregation at the morning service, which was unusual in that not a dollar was asked for any purpose and no collection was taken.

For some time past work on the remodeling of the church has been in progress, until from the old structure has been formed a modern building with convenient arrangement of seats, choir and pulpit. An addition placed on the north side of the church adds a vestibule, which gives entrance into the inner rooms.
Astoria Litigants Win Suit.
ASTORIA, Or., Oct. 19.—(Special).—The trial of the cases of Thomas G. Holton, Joseph Sinnott and George Andersen, against the City of Astoria to recover \$1500, \$2000 and \$1000, respectively, for damages to property through sliding ground alleged to have resulted from making the improvement of Irving avenue, was completed in the City Court this evening. After being out an hour the jury returned a verdict awarding damages to the plaintiffs as follows: Andersen, \$400; Holton, \$650; Sinnott, \$250.

put it through. I affirm that there would be no bribery.

Idea Regarded as Solution.

"If proof of bribery would of itself devitalize and annul the concession, if such proof would of itself involve the total loss of the franchise and property—the safety of property, the protection of the dollar, the conservation of moneyed investment, would render absolutely impossible any successful bribery, even under our present system. The promoter behind the plan has may take a chance on going to jail himself, but let the life of the franchise be at stake and he will take no chances whatsoever."

"Directors would not take a chance; attorneys would not take a chance; officials would not get or take a chance. It is strange that such a plan has never been attempted before. The entire meat of the difficulty is in this suggestion."

TEST FARMS LEAD

Experiment Station Crops Big
and High Grade.

INCREASE IS 30 PER CENT

Professor Scudder, of Oregon Agricultural College, Makes Trip
Over State and Finds Scientific Farming Success.
OREGON AGRICULTURAL COLLEGE, Corvallis, Oct. 19.—(Special).—That the scientific methods of farming followed at the three Eastern Oregon branch experiment stations are extremely practical and have been as largely responsible as have been the unusually favorable weather conditions, for the splendid showing made this year by station crops, is the opinion of Professor H. D. Scudder, of Oregon Agricultural College, who has just returned from a trip of inspection covering the experiment stations in Sherman, Crook and Harney counties.

The evidence upon which Professor Scudder bases his opinion is the fact that the crop raised at the experiment stations, under direction of the college experts, yielded, on the average, 20 to 30 per cent larger crops than have been taken this season from other fields in the same localities.
Professor Scudder reports that Eastern Oregon farmers are having such success with corn, field peas, alfalfa and Turkey Red wheat as to indicate a promising future for these crops in the dry farming belt.
"Five years ago," said Professor Scudder, "it was claimed that these crops could not be grown profitably in this section of Oregon, although the college agronomists emphasized them as being of the greatest future importance in the development of dry farming. The response of the farmers to these ideas has, in the last few years, been growing stronger and now in several counties, notably in Sherman and Crook counties, more than half of the acreage of wheat now grown is the Turkey Red variety and on the branch experiment station farm at Moro this variety has consistently proved a superior yielder over all the many varieties tried."

perior yielder over all the many varieties tried.

Corn Growing Successful.

"Corn growing, both for grain and as a forage crop, has been very successful on the college farms at Moro, Metolius and Redmond, which fact proves the corn crop to be a valuable one for the dry farmer to raise. The success of this crop is especially pleasing to the college authorities, as the variety that has proved superior to all others is a college bred corn introduced throughout the state. Hundreds of farmers not only in Eastern Oregon, but throughout Western Oregon, are now growing this variety from seed obtained from the department of agronomy and find it superior to all others."

"An equally important success has been obtained in the demonstration of the value of field peas in the dry-farming belt and the success with which they may be grown. The stations at Moro and Metolius have obtained even better results than were expected from this crop, both for the production of seed hay and for pork production. Pigs fattened on nothing but the field peas obtained at Moro and at Metolius, gave returns in pork of from \$12 to \$18, for each acre of peas. This makes the pea crop superior as a money producer to wheat, as there is no cost for harvesting the crop and, more important still, the fertility of the soil is increased instead of depleted. In some instances an even greater profit was obtained where the crop was harvested for the seed. The brown field pea introduced at the Moro experiment station has proved far superior to all other varieties and will be multiplied as rapidly as possible for distribution."

Alfalfa Experiment Wins.

The greatest success of all in the dry-farming work and the one most gratifying is that obtained at the Moro, Metolius and Burns experiment stations with alfalfa grown in cultivated rows for seed production. This crop grown in this particular way has been given a wide advocacy by Professor Scudder, and the results now being obtained more than justify the attitude of the college authorities on this question. One variety introduced from the Dakotas by Professor Scudder has proved superior to all others obtained or grown locally—superior not only in drought resistance, but more especially in resistance to frost and in seed production. It is probable that former estimates of possible profits of \$30 an acre annually from the alfalfa seed crop will be considerably exceeded. The seed produced in this way is not only of exceptional value on account of its environment but also because of the unusual hardness and vigor of the new variety from which it is being obtained. This crop has already demonstrated itself a much superior profit maker to the wheat crop, as well as being a soil builder instead of a soil destroyer. At Moro this year yields of more than one ton of hay to the acre were also obtained by improving methods to obtain as high as one and one-half tons of hay.

Superior Yields Result.

Another feature of the branch experiment station work which has loomed up this year very prominently is the superior yield and quality obtained from certain varieties of potatoes introduced into Sherman and Crook counties by the college. The potato crop on the dry-farming land is always one of unusual quality, and with the better varieties being developed by the experiment stations will also prove a profitable crop. With the success obtained so far with

with alfalfa grown in cultivated rows for seed production. This crop grown in this particular way has been given a wide advocacy by Professor Scudder, and the results now being obtained more than justify the attitude of the college authorities on this question. One variety introduced from the Dakotas by Professor Scudder has proved superior to all others obtained or grown locally—superior not only in drought resistance, but more especially in resistance to frost and in seed production. It is probable that former estimates of possible profits of \$30 an acre annually from the alfalfa seed crop will be considerably exceeded. The seed produced in this way is not only of exceptional value on account of its environment but also because of the unusual hardness and vigor of the new variety from which it is being obtained. This crop has already demonstrated itself a much superior profit maker to the wheat crop, as well as being a soil builder instead of a soil destroyer. At Moro this year yields of more than one ton of hay to the acre were also obtained by improving methods to obtain as high as one and one-half tons of hay.

Superior Yields Result.

Another feature of the branch experiment station work which has loomed up this year very prominently is the superior yield and quality obtained from certain varieties of potatoes introduced into Sherman and Crook counties by the college. The potato crop on the dry-farming land is always one of unusual quality, and with the better varieties being developed by the experiment stations will also prove a profitable crop. With the success obtained so far with

corn, potatoes, field peas and alfalfa

as crops with which to replace wheat, the college authorities feel that they have amply demonstrated at the branch stations the greater profits that may be obtained from more intensive methods of farming where these crops are used in rotation with wheat. The greatest result obtained from such a system is the improvement and permanent maintenance of the fertility of the soil, which is the final object always sought in the efforts of the college for the industry.

Winship Pays Tribute to Oregon.

JOHN DAY, Or., Oct. 19.—(Special).—

—In an address at the fair before a large audience of Grant County people, Dr. A. E. Winship, editor of the New England Journal of Education, educator and writer, spoke in the highest terms of Oregon, its climate, resources and products. He paid a high tribute to the scenic beauty of the John Day Valley and to its resources as exhibited at the fair. He ranks the state in the forefront in affairs educational, political and social. Dr. Winship has made an extensive tour of the state, both east and west. He was the chief instructor in the Grant County Teachers' institute, which has just closed a three days' session here.
