**\$23.00 White Enamel Dressers for \$14.98**

White Enamel Dressers, as illustrated above, have oval plate mirrors; 3-drawer style. Regularly \$23. Special for this sale only, at **\$14.98**

### REED IS GROWING

New Courses of Study Will Be Open to Students.

INSTRUCTORS ARE ENGAGED

Physical and Chemical Laboratories to Be Fitted Up and Dr. Torrey Will Get Specimens for College Museum.

With the coming next year of Dr. Compton, of Princeton University, and Dr. Morgan, formerly of the University of California, who is now on a tour of Europe, instruction in the exact sciences at Reed College will comprise a larger part of the college work than it has during the past two years. So far the only scientific courses have been in general science the first semester and in general biology the second semester of this year, both of which were given by Dr. Torrey.

The biological laboratory is well equipped for elementary work. It has 20 compound microscopes and four binocular microscopes. Additional equipment and supplies have been ordered for next year, most of it coming from Germany.

This summer Dr. Torrey with several students in the department of biology will go to Friday Harbor on Puget Sound, where a biological summer school and laboratory is maintained under the direction of the University of Washington. Dr. Torrey on this trip will collect specimens for use in the Reed laboratory. He expects to obtain different varieties of vertebrates and invertebrates including animals of various kinds, fish, shell-fish, corals and a number of microscopic organisms, which will start the biological museum of the college.

Specimens Valued at \$50,000.

In the summer of 1906 Dr. Torrey went on a trip with a party of scientists on the Albatross, a ship maintained by the United States Fish Commission, to the Orient and to the islands of the Pacific. Dr. Torrey, as the

representative of the University of California secured duplicates for the university of all the collections made on the trip. The specimens thus secured for the university museum have been valued at about \$50,000.

The biology department will give further opportunity for scientific study in connection with the experimental fish hatchery which will soon be established on the Reed campus by the State Game and Fish Commission. It is planned at the station to make a careful study of the hatching of fish with a view to decreasing the cost both in time and money. A study will first be made of the methods of feeding the young fish until they are old enough to be turned loose in the streams. A study also will be made of the effect on the eggs and on the fish of different temperatures of the water, and a study will be made of the diseases to which fish are subject in Oregon waters.

A large part of the work will be done by the major students in biology under the direction of Dr. Torrey and State Game Warden Finley. In addition to making experiments which, it is hoped, will effect a great saving in time and money in hatching and raising fish in all parts of the state, it is expected that students will take advantage of the opportunity to make a scientific study of the fish industry and thus trained men will be available to work out some of the problems connected with one of the greatest industries of the state.

Dr. Compton will arrive in Portland in July and will begin at once the work of setting up the physical laboratory. A large part of the apparatus has arrived. About \$5000 has been spent in securing the best equipment available. Only elementary courses will be given in the subject next year, and additional equipment will be supplied as the advanced work demands more extensive apparatus.

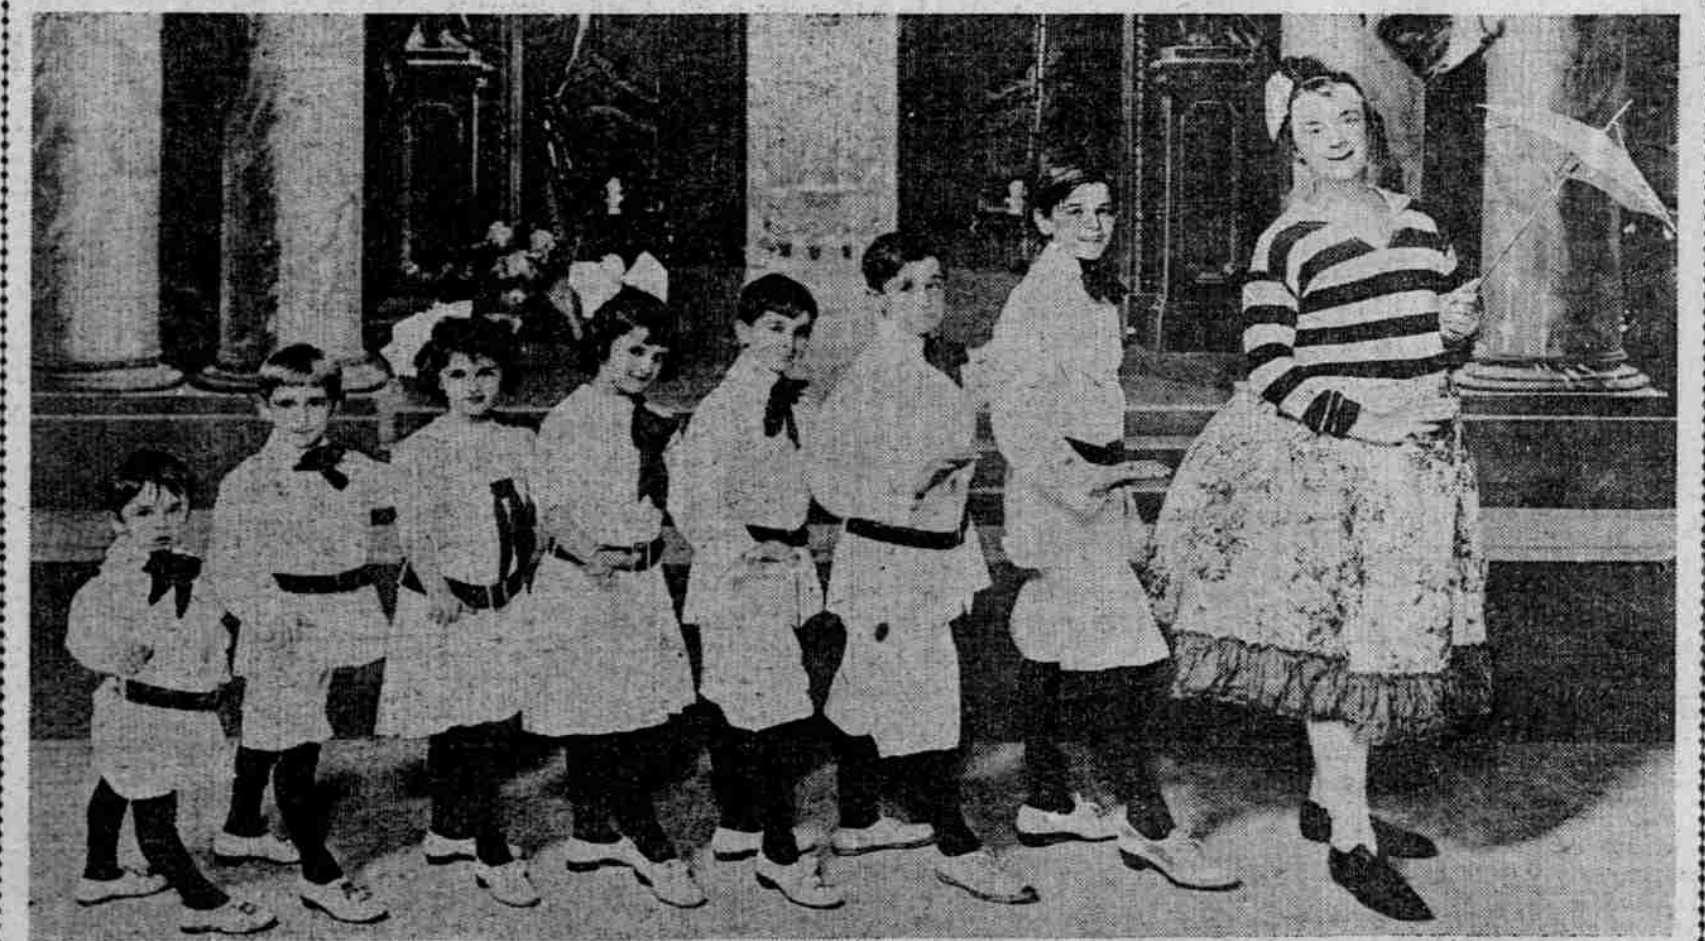

Dr. Morgan will come to Portland in August and begin work in the chemical laboratory. About \$5000 has been spent for equipment in this laboratory, only elementary courses will be given next year.

First Chautauqua to Be July 4.

DALLAS, Or., May 24.—(Special.)—Arrangements are being completed for the holding of Polk County's first Chautauqua. Interest in this event, to be held from July 4 to 10 in this city, is manifested all over the county. Already applications for season tickets are being sent in from various sections, and indications point to a large tent city near the Chautauqua grounds in the City Park. The arrangements are in the hands of a committee from the Dallas Commercial Club and the Ellison-White Chautauqua Association.

### JUST LIKE ALL OTHER "HOME FOLKS" EDDIE FOY TAKES GREAT JOY WITH HIS POPULOUS FAMILY

Popular Comedian Brings 'Em All on Transcontinental Tour and Says He's Seven Laps Behind When It Comes to Saying Good-Bye to the Eight Children. Why He Abandoned Life in a Flat for Home Among the Rocks at New Rochelle Is Explained.

EDDIE FOY AND THE SEVEN LITTLE FOYS IN "OVER THE RIVER."

EDDIE FOY is just like "home folks" only so far as children are concerned he is more so. Quite recently the writer dropped into

the well known comedian's private car and found him at his happiest—in the bosom of his family, for his entire family,—wife, children and two nurses, are

traveling along with Papa Foy on his transcontinental tour. "Are you ever late, Mr. Foy, in getting to the theater when you are play-

ing in New York?" he was asked. "Say, my home is in New Rochelle, a suburb of New York, and a man living in New Rochelle is always late for

everything, and a man with eight children is eight times as late. In addition to kissing each of them good-bye, I have to take each one on my lap for a few minutes.

"And you have only one lap?" "Yes, I'm handicapped frightfully when it comes to laps. In fact, I'm seven laps behind the world's record."

"How's business?"

"Kiddies Always Go Alone."

"Fine, but you see I can't lose in that direction. I'm sure of a big house if I have the kiddies with me."

"Standing room only?"

"Yes, and a very little of that. I am one of the few actors in a position to carry his own audiences. Broadway managers shiver when they see me coming. They think I'm going to ask for seats for myself and family. Most of them find it cheaper to give a special performance for us, but none of them has ever turned us down. When they have a poor attraction they rely upon our attendance to make it look like a long run."

"Are there any leading ladies in the Foy Stock Company?"

"Three girls and five boys."

"Their names and ages, please?"

"Help," yelled the comedian. "I haven't got the batting order with me. Just get the New Rochelle directory, and tear out the 'T' page."

"All ready?"

"Have you no mercy?" came in a sepulchral tone. "I've got a poor memory, but I'll do the best I can. I keep track of them with an adding machine. Let me see," said the comedian scratching his head like a man trying to remember the capital of Patagonia.

One Named for Bryan.

"There's Katherine," he went on. "She's 18 and the eldest. Bryan, 15; Charlie, 12; Richard, 11; Mary, 10; Madeline, 8; Felix, 7; Irving, 4."

"Bryan was named for William Jennings Bryan the first time he ran. I'll never forget how I hurried to have the boy christened. As it turns out I get place money, for Bryan has got the next best job to the President's. We started naming the children after friends, but after awhile we found it necessary to stretch the rule to include more acquaintances. If there are any further additions to the family we will have to start naming them after Pullman cars."

"What drove you to New Rochelle?" "Can you picture the Foy family in a flat? That's just what we did until we were all bunged up from running each other down. Then the rest of the tenants were always complaining about their inability to get the use of the clothesline. Finally, after I had been trampled on until I was unable to dance, I started out to look for a place in the suburbs."
