OIL CARE IS NEEDED

Different Type Motors Require Varying Kinds.

ENGINES ARE CLASSIFIED

A scientific analysis of the latest data from the automotive industry indicates that gasoline consumption and safety features vary greatly among different types of engines. Some engines are designed for high performance, while others are optimized for fuel efficiency. The following classification is based on the type of engine:

- **4-Cylinder Engines**: These engines are typically used in compact cars and are known for their reliability and low maintenance costs. They are ideal for urban driving and provide a smooth ride.
- **6-Cylinder Engines**: These engines are commonly found in mid-sized cars and SUVs. They offer more power and acceleration compared to 4-cylinder engines, making them suitable for long-distance driving.
- **8-Cylinder Engines**: These engines are usually found in luxury vehicles and high-performance cars. They provide exceptional power and performance, but they are more fuel-consuming and require regular maintenance.

The choice of engine depends on the intended use of the vehicle. Drivers should consult their vehicle's manual and consult a mechanic to determine the best maintenance schedule for their specific engine.

GREAT OREGON HIGHWAY DESCRIBED IN BOOKLET

Portland Automobile Club Publishes Story of Wonders of Columbia River Gorge, New Accessible to Tourists by America's Greatest Scenic Road.

TRIP TO CALIFORNIA IS MADE WITHOUT PUNCTURE OR MECHANICAL EXPENSE.

CHARLES BERTMAN, OF BAKERS, OR., AND HIS FAMILY, IN LIGHT HUDSON SIX.

No "Skimping" Anywhere in the Chandler Light Six, $1295

Chandler reputation doesn't rest on the fact that this was the first light-weight six selling for less than $2000. It doesn't rest on the fact that the Chandler pioneered the light-six field when all the rest of the industry was insisting that sixes had to be high-priced and heavy. Chandler reputation rests primarily on the marvelous Chandler motor, Chandler comfort and economy and the fact that the Chandler has never been "skipped" either in quality of materials or character of equipment. Each part of the Chandler is as good as any other and the character of the whole car is reflected in its equipment.

All of them are on the Chandler:

- **Beach Magneto**, admirably the best ignition.
- **Craw & Darrin Electric Starting Motor.**
- **Fisher & Davis Universal Speedometer.**
- **Rayfield Bodkin-Job Carburetor.**

Three chief elements of the Chandler motor are its back-up for driving motor shafts. Kicker motor, a durable, silent, satisfactory and economical for a dirty, rusted bottom. An essential for all passenger construction.

Meadow Chandler Motor

powerful, quiet, uncompromised and beautifully styled. A pleasure to be seen in.

Then Think of the Price, $1295

Seven-Passenger Touring Car and Roadster

COME NOW FOR YOUR DEMONSTRATION
