## 6 1-2 TON CONCRETE FILLING SAVES GIANT TREE ONCE THOUGHT DYING

Old Sugar Maple on Ladd Estate Near Oswego Is Revived After Treatment by Latest Method of Surgery-Task Is Considered Record.

VIEW OF TREE ON LADD PROPERTY NEAR OSWEGO AFTER COMPLETION OF THE FILLING.

Six and one-half tons of rock and concrete comprise the filling which has just been made in a stately old sugar maple tree at the Ladd residence near Oswego. The filling is said to be the largest made in a tree anywhere in the United States since the finanguration of the system of tree aurgery several years ago.

The filling stands it feet in height and is 11 feet in diameter at the base. The filling was made with joints to allow for the vibration of the tree and filled it with rock and concrete. Since then the tree has showed there was room inside for three workmen. The hole was 11 feet in diameter at the base. If feet up from the base. The filling was made with joints to allow for the vibration of the tree and low for the vibration of the tree and prevent cracking of the material. The filling of 6½ tons includes 2½ tons of large rocks, some of such size that several men were required to carry the filling stands it feet in height.

The filling stands it feet in height and is 11 feet in diameter at the base. The filling was made with joints to allow for the vibration of the tree and prevent cracking of the material. The filling of 6½ tons includes 2½ tons of large rocks, some of such size that several men were required to carry them. Ultimately, it is said, the bark of the tree will grow over the concrete and the bark of the tree will grow over the concrete and the bark of the tree will grow over the concrete and the bark of the tree will grow over the concrete and the bark of the tree will grow over the concrete and the bark of the tree will grow over the concrete and the bark of the tree will grow over the concrete and the bark of the tree will grow over the concrete and the bark of the tree was defined with joints to allow to be the provent cracking of the tree and filled it with rock and concrete. Since the tree has showed between the concrete. Since the tree has showed by the provent cracking of the tree was made with joints to allow the provent cracking of the provent cracking of the provent cracking of t

## TOADSTOOL IS FUNGUS JUST LIKE MUSHROOM

Individual Characteristics Are Marked, but Only Essential Difference Lies in Values as Food-Names Indicate Deadly or Edible Qualities.

fungus forms, the toadstools or mush rooms. They come like Jacks-out-ofa-box so that the popular notion is 
that they grow in a night. With the 
maturity the sitem and leaving the 
connecting portion as a ring. 
On the under side of the cap are deproved to the cap are dependent plate-like gills on which are 
they are edible or not, that is, whether 
they are toadstools or mushrooms. Unfortunately, there is no royal rule of 
test. Odor nor peeling nor blackening 
of silver spoon are of any value. There 
are individuals with such marked characteristics that they cannot be confounded with any others and these may 
be readily learned and our collecting 
for cooking purposes restricted to them. 
The common meadow toadstool with 
pink gills is generally referred to as 
the mushroom, as if it were about the 
only edible one. As a fact there are 
several hundred, which have bees 
proved to be a safe and agreeable addition to our bills of fare and more are 
being added continually.

The popular distinction in the use of 
the term toadstool as meaning deadly 
and we may call them toadstools or 
mushrooms as we choose. 
Figure 1 is a reproductive 
and arrangement of the sporte can be 
prettily shown by a spore print. 
This is made by cutting off the stem 
and placing the cap, gill side down, on 
some paper and covering with a bewl 
or other protection from air currents. 
In the morning there will be a collection of spores arranged as they were 
dropped from the stem and leaving the 
connecting portion as a ring. 
On the under side of the cap is 
sport bother or performent the reproductive bodies or spores, corthe reproductive bodies or spores, corthe reproductive bodies or spores or spores or 
sponding to but very different from 
the seeds of the higher plants. Figure

Boy Sent Home for Appearance With Open Collar Appeals.

MERCHANTVILLE, N. J., Sept. 13.—Can the public school authorities allow the girl students to wear low-neck dresses and forbid the boys from coming to school with turned-in shirt colling to school the girl students to wear low-neck dresses and forbid the boys from coming to school with turned-in shirt collars? This is the question that has caused two special meetings of the local Board of Education to be called and an appeal to be made to the County School Superintendent and then to the State Board of Education. The question will next go to the courts.

The two small boys of F. V. Turner appeared at school attired in immaculate waists, but with low collars and opened in the front. The teacher sent them home. Mr. Turner complained to E. J. Frey, the principal, and he sustained the teacher, as did the local Board of Education. W. B. Wolcott, a lawyer, has been retained by Mr. Turner.
