THE Queen of Bulgaria, whose ability as a nurse has been manifested time and time again since she established in Sofia one of the finest and best-equipped hospitals, has again taken actively to the work which she loves so dearly. The alleviation of the sufferings of her subjects has always been the thing nearest her heart and so, while the soldiers of her kingdom are marching to the war, she is devoting her time and attention to nursing the sick orphans in the orphanages of her country.

Queen Wilhelmina attended the opening session of the lower house of the States General, the legislative branch of Netherlands, corresponding to our House of Representatives. The Queen gave an address to the members.

The Swiss army, mobilized to prevent invasion by the warring nations on her border, is engaged in constant practice. It was reported recently that the Germans had dropped bombs on a Swiss town but this is not confirmed officially. None of the bordering

countries has yet crossed Swiss territory. The Nevada came from Boston to the Brooklyn Navy-yard recently to go into drydock preparatory to her speed trials, which occur in a few days. She is of the dreadnought class, displacing 27,500 tons, and, with the Oklahoma, is the largest United States battleship afloat.

There has just been placed on view at the American Museum of Natural History in New York a dodo restoration. It was presented by Walter Winans, a wealthy American who has lived in England for many years. The skull and legs are cast from an actual specimen of this giant pigeon and the feathers are from various birds of like color. The dodo was supposed at one time to have been the product of fancy, but authentic records now show that it existed until 1660.

The citizens of Brownsville, Tex., are breathing a big easier now that the Twenty-sixth United States Infantry has arrived to guard and protect the lives and property of the Americans. The Twenty-sixth Infantry is the same regiment which was here about 10 years ago and the men were the last white soldiers in Brownsville before

the "shooting up" of the town by the famous colored troops. The Mexicans in Matamoros continue to distribute handbills in favor of the "revolution in Texas," as they call it. The Carranzistas disclaim all knowledge of the origin of these handbills.

Professor Lee De Forest has gone to London to offer the British government and later the French government his newly invented apparatus for detecting distant sounds. He calls it the audion amplifier and it is an adaptation of the incandescent electric light. With it he thinks the British can detect in good time the approach of enemy aircraft. Mr. De Forest is the inventor of many other electrical appliances, including a system of wireless telephony.

The One to Blame.
Kansas City Journal.
"I have an engagement to meet my husband and I'm an hour late. It has got me all dustered. It is annoying to be late."
"It is so. I'd lecture him good for it."

Definition of an Optimist.
Baltimore American.
"What's an optimist?" "A man who tells other people not to worry when things are coming his way."
