

New York City.

Our author is a graduate of Harvard College, 1908, and his recent book "Panama, Pist and Present." Is an interesting account of the work of Americans at the Canai Zone.

"The Story of the Submarine" has as its text the development of the "underseas boat." from the time of James I of England to the present day. The book is meant principally for the mechanical amateur, but there is much in it to interest the general reader. It is graphic, informing and at all times a mire of condensed information on the subject at issue. Particularly interesting is its account of the inventions of Americans—especially those of Simon Lake—inventions which were used with such death-dealing frightfulness in the development of the present German submarines.

There are preliminary chapters on Cornelius Van Drebei who, in the reign of James I, devised an "invisible eei" to "murder the flat bottoms" of hostile ships; on the Yankee David Bushnell, who found the submarines a useless

of James I, devised an "Invisible eei" to "murder the flat bottoms" of hoshile ships; on the Yankee David Bushnell, who found the sunbmarine a useless plaything, and left it a potentially formidable weapon, and on the vain efforts of Robert Pulton to interest the governments of his time in the new idea. But the real story begins with our Civil War and the serious attempts made on both sides to perfect the device. Mr. Bishop graphically describes how the Confederate "Peripatetic Coffin" as it came to be called, after sinking six times, succeeded in destroying the Housstonic, only to be sunk with it. He goes on to tell of the various Prench, English, Spanish and Russian experiments in submarine designing and how, in the end, two Americans, John P. Holiand and Simon Lake, wrestled with the problem and triumphantly solved it.

solved it.
Such is the narrative which leads up to a comprehensive account of the part submarines have played in the great

War.

The book contains also chapters on "The Whitchoad Torpedo," on "Mines," on "Accident and Safety Devices" and is illustrated with 60 drawings and photographs, showing the development of the submarine idea, with portraits of its various inventors.

About such a man there is a certain mystery, a strange, perwasive appeal to all that is native and noble within us, a sanctity half tragic and half triumphant; and it is no wonder that to a man who feit the spell of his personality, and saw him in his treat hours of vision and conquest, all portraits of Lincoln are unsatisfactory. Albeit, the seams of hard struggle, the light of a high resolve, the tonch of an infinite pity, its features written all over with the hierogiphics of sorrow, yet having lines where smiles fall asleep when they were weary, neither rudely masculine nor softly feminine, but which reminds us always of the mother and the boy behind the man. Whose will study that face, in the light of the following pages, will learn not only what america is, what is has cost, and what it prophesies, but something of what life means, of what less hidden in the scale of the low less—say, something of the cost of all progress and the majesty of noble human living.

man living.

The volume is divided into 18 chapters. A few of the most important are "Personal Mention," "Lincoin's Easy and Friendly Manner," "Ann Butledge in the Life of Abraham Lincoin," "Lincoin's Foringfield Life of Mary Todd Lincoin." "Lincoin's First Law Partners," "The Springfield Life of Mary Todd Lincoin." "Abraham Lincoin, as Seen in Two Speeches Fifty Years Ago," "Between the Two Speeches of National Importance," "What Religion Meant to Abraham Lincoin," "Characteristic Moods of Abraham Lincoin" and "Abraham Lincoin" Sposition in History."

Well has Mr. Rankin written: "Lincoin was indeed the First American."

Our author is professor of hortculture, Pennsylvania State College. His book, of 222 pages, and finely and attractively lilustrated, is comprehensive, up-to-date, and first-class in every respect. It ought to have a large sale, especially in agricultural Oregon.
