PREPAREDNESS FOR ALL PHASES OF MILITARY OPERATIONS IS TAUGHT AT CORVALLIS SCHOOL

Technical Training of Engineer, Miner, Forester, Dietitian and Chemist at State College Makes Students Efficient for Service in Army—Practical Experience in Tactical Situations Received.

Drill on O. A. C. Campus

O. A. C. Cadets in Skirmish Line

OREGON AGRICULTURAL COLLEGE, Corvallis, May 12.—(Special.)—Military drill at the Oregon Agricultural College, usually ending for the year with the annual military inspection by officers of the United States War Department, is not only being continued this year, but, in view of the war demands, is considerably extended. In addition to the regular noon-hour drill special classes are held for instruction and training in military tactics, many hours of labor are spent in constructing trenches, sentinal duty is enjoined and special guarding is required.

While all this work is going on members of the cadet company and officers of the college are much interested in the character of the forthcoming report of Inspection Officer Major Clarence B. Smith, of the Coast Artillery. In the usual course of Government procedure it could not be expected to reach the college before the first to the middle of the Summer, but under the present emergency conditions it may be expected. Hope that the field evolutions, especially the extended order drills, served to impress Major Smith quite favorably is indicated in casual remarks elicited by unofficial and informal inquiries.

High Rating Is Expected.

Among other things was mentioned a wish that the inspection of the Oregon College Cadet Regiment might have been made earlier, as their work offers an excellent standard for comparison. If the hopes of the cadets are realized in the official report, the college will receive the rating of "distinguished college" institutions. Many advantages would accrue from such classification.

Another factor considered is the depleted condition of the regiment, due to the heavy drain on its personnel for war and war industry purposes. Not more than three-fourths of the full complement appeared for inspection. The absent men were largely the senior officers, whose place had been taken by newer officers just promoted and unfamiliar with some of the finer details of Army maneuvers. The call for men, for both military and civil duties, made by far the heaviest demands in the ranks of the upper classes. Whether this fact is considered in the official reports will not be known until copies reach the campus, but members of the regiment are generally hopeful that it will be.

Value of Military Science Seen.

Lieutenant-Colonel Vernon A. Caldwell, commandant of cadets at the Oregon Agricultural College, in his report to the inspecting officer emphasized the intellectual value of military science in the college course and paid a high tribute to the resources of the land-grant college as a type of institution for training officers for the Army. These institutions, he declared, by coordinating the technical training of the engineer, the miner, the forester, the logger, the scientific farmer, the dietitian, chemist and expert in physical education give the student the most efficient training for service in the Army. They teach how to convert the resources of nature into effective agents for serving the Nation.

"The instruction for the year," said Caldwell, "has been planned to obtain a fundamental understanding of tactics. The student has been obliged to test his knowledge of any part of the military training by stating definitely how it helps to secure success in combat. This method does not make for spectacular results, but it is the very basis of sound, progressive military training."

Two principles have been followed in the year's work. First, to require as much real thinking in the study of military science as in that of any other college course; second, to promote the idea that every course at a land-grant college has a definite military value.

Field Work Part of Training.

Under the first principle tactical situations and tactical methods have been taught with great thoroughness and

with the most practical ends available. All theory is ultimately worked out in the field. During drill hour a system has been followed whereby one company has been inspected by the assistant commandant, who selects student instructors for graded field and garrison training; another company is similarly handled for guard duty; another for training in marksmanship, and still another for engineering. The other two battalions work under their own officers at general training.

Under the second principle, the commandant says in his report: "The importance of securing full recognition from the other departments of the land-grant colleges of the definite military value of their courses cannot be overestimated in developing these colleges as real schools for training Army officers. On the other hand, the public, as well as the military authorities, cannot appreciate too highly the services that these departments, efficiently conducted, can render to the Army."

Electrical Department Aids.

Colonel Caldwell then points out specific instances of the direct service of many of the technical departments to military service. The electrical department, for instance, has a course in signaling that goes as far as wireless. The commerce school has a credit course of instruction sheets that are of distinct value to the entire military organization. The course in camp cookery by the Department of Domestic Science gives instruction in a fundamental military subject. The various engineering courses are giving direct military instruction, and the course in logging engineering is giving both time and thought to the practical handling of heavy mobile artillery and to railroad work immediately back of the fir-line. The mechanical department is taking effective steps to carry on practical work in ordnance. The agricultural departments are vigorously directing the production of food supplies throughout the state. The department of physical education is bringing its instructional and its exercises into direct application for military training, and is emphasizing the tactical value of team work in college games.

Land Grant Colleges Praised.

Weeks before the declaration of war, at the direction of President Kerr, all departments of the Oregon Agricultural College had rendered to the executive office written statements giving their judgment of the definite military value of the resources of their departments.

"If the students at land grant colleges," declared Colonel Caldwell, "after this formidable brief of training for military officers, were put on the pay allowance of private soldiers—say, \$25 per month—provided they made good in their regular studies, including their

military training requirements, I believe the United States would benefit doubly in securing a better quality and larger quantity of military training and of vocational and technical training."

MAY FETE DELIGHTS MANY
Castle Rock Children Provide Interesting Entertainment.

CASTLE ROCK, Wash., May 12.—(Special.)—Practically all of Castle Rock and the surrounding districts gathered to see the May fete given by the school children on the school grounds last Friday afternoon. The parade was led by the May pole dancers, followed by Lowell Tinsley, the crown bearer, Mable Clare Brown, Jean Kalmbach, Beverly Schmidt, Pauline Teasley, Annie Huntington, Grace Myers and Juanita Lykeman, flower girls; Violet Hatch, Blanche Taylor, Margaret Peabody and Georgia Lange, maids of honor; then the Queen, Miss Agnes Pettigrew, and Emil Lane, who crowned the Queen.

The dancing and singing of the girls, as well as the winding of the three May poles, was beautiful and graceful, and all expressed the hope that the fete would become an annual event.

HOOD RIVER PASTORS MEET
Rev. E. A. Macnamara Is New Head of Association.

HOOD RIVER, Or., May 12.—(Special.)—The Hood River Ministerial Association was reorganized Tuesday afternoon. Officers were elected as follows: Rev. E. A. Macnamara, pastor of the St. Mark's Episcopal Church, president; Rev. J. L. Allen, pastor of the First Baptist Church, vice-president; and Rev. L. G. Leavitt, pastor of the First Christian Church, secretary-treasurer. Monthly meetings will be held.

All local churches will suspend services next Sunday night in order that members of the congregations may participate in the Sunday school rally to be held at the Riverside Congregational Church.

Polk Road Men Work for Bonds.
DALLAS, Or., May 12.—(Special.)—The campaign for the road bond issue is being actively waged in Polk County. Opposition to the measure has developed in certain unexpected quarters, and a hard fight is being made to overcome this. By those familiar with the situation it is confidently expected that Polk County will return a large majority in favor of the bonds.
