

# PHOTOGRAPHS VIVIDLY DESCRIBE GREAT EUROPEAN WAR

Dogs Are Man's Best Friends on Battlefields—German Contrivance to Stop Tanks Is Failure—Dutch and Teuton Officers Closely Examine British Prisoners.

Turkish Prisoners in Bagdad

**Turkish Prisoners in Bagdad.**  
 IN the valley of the Euphrates-Tigris, Turkish prisoners captured in the great British drive through Mesopotamia were marched through the ancient city of Bagdad, while the enthusiastic Arabs who lined the street cheered the British. The British have a prison compound in Mesopotamia, where the horde of captured Turks are confined. In a British official photograph the Turkish prisoners are shown marching on New street, as "Piccadilly Circus," under British escort. This photograph animates the old drawings made from imagination picturing the entry of the famous citadel centuries and centuries ago.

**Real Dogs of War on Duty.**  
 People often talk of the "dogs of war," but the dogs they think of are far different from the real war dogs now playing a wonderful part in the trenches. The releasing of these dogs is not the sign of conflict, but of success for those who have fallen. Dogs are used extensively to aid the man of the medical corps find the wounded. Often they act independently in bringing aid to the hurt until there can be carried back to their own lines. As everywhere else in the world the dog has proved in the trenches that he is man's best friend. A recent photograph shows the dogs in a portion of trench on the Marne front. The poilus are holding them in leash until they get the opportunity for searching the wastes of no man's land for the wounded and the dying.

Fishing Fleet To Help Hoover.

**Fishing Fleet to Help Hoover.**  
 To help Uncle Sam and the boys in the trenches a great fishing fleet will bring upwards of 1,000,000 pounds of fish to shore every week. This fish will enable Americans to go without beef and pork that are needed to feed our soldiers and our allies if we are to be victorious in this war. The work the Eastern Fisheries Company has undertaken in securing this fleet is a direct help to Hoover in his efforts to conserve the food of the country.

The Kingfisher is the first steam trawler owned by the Eastern Fisheries Company to be completed. The company has invested \$10,000,000 in the project, and will have 10 ships like the Kingfisher constructed. These steam trawlers are unlike any other kind of fishing ship. They are built with curved bows that will give them twice the speed of the ordinary fishing ship. Instead of taking months for a cruise these ships will leave port and be back again with a full load of fish inside of a week. One of them with a crew of 22 men will do as much work as six schooners and 140 men, and will catch as many fish in a week as the ordinary schooners catch in six months. The new boats will ply to the Great American Banks that extend off the shore from Boston to Newfoundland. They will go after cod and haddock principally.

A recent photograph shows the Kingfisher on the ways before the launching.

**Girl Dispatchers Training.**  
 Women will soon have another man's job and it is a mighty good one, too. They have made good at every position that has been opened to them so far, so the Pennsylvania Railroad is giving them the opportunity to learn to be train dispatchers. Of course, they won't step right from the school to the job of guiding trains through the intricacies of terminals and yards. They will first have to serve apprenticeships just as the expert men dispatchers did, as telegraph operators along the line of the Pennsylvania system.

Training Girl Dispatchers.

German Anti-Tank Gun.

**German Anti-Tank Gun.**  
 The British tanks have the Germans on the jump trying to create a force or contrivance that would stop them. The latest thing they have produced is a heavily armored turret which appears as a small blockhouse on the battlefield. A gun is mounted in the turret, but the tanks have swept by these armored blockhouses as though they were not there. The first photograph to arrive in this country showing the new anti-tank gun shows one that has just been captured by the Anzacs, who are shown examining it. To get inside it is necessary to get down on hands and knees and crawl.

**British Prisoners in Holland.**  
 A remarkable photograph showing British prisoners of war in the hands of the Germans recently reached the United States. It shows a group of prisoners arriving at the railroad station of Venlo, a city in the Province of Limburg, a southern province of Holland, near the German frontier, having their papers examined by German and Dutch officers. The British are lined up on the right of the photograph, while the officers scrutinize their papers carefully. The soldiers are interned for the duration of the war in Holland by treaty.

No other photograph of this kind has arrived in the United States since the beginning of the war.

British Prisoners in Holland.

Captured German Raider Crew.

**German Raider Crew Captured.**  
 In a recent raid over England by a number of Gotha machines, two of the German planes were brought down and six occupants captured, despite the fact that the raid was made in the early morning hours. In a British official photograph one of the captured German pilots wearing the iron cross ribbon is shown leaving the car which brought him to the detention camp.

German raids over Great Britain have ceased to hold terror for the people and the protection against the air raiders has been so perfected that usually the enemy is stopped before any damage can be done. The damage done in the last month through raids has been extremely slight.

**United States Aviators Use New Aero Camera.**  
 The United States aerial observers have learned the art of snapping the enemy trenches with the new aeroplane cameras. The eyes of our Army are no longer human eyes, for the camera has taken its place in war and is being effectively used by our daring aviators in photographing the enemy's lines to inform the gunners of the range.
