AS SEEN BY CAMERA

"KEEPING the Hun on the run" is one of the popular slogans of the United States Marines. This branch of the fighting forces overseas is among familiar sights along the roads back of the front-line trenches in France as the contingents move up for service in the trenches, or after serving a period return to rest billets.

Military railroads have the right of way on the western front so a ruined house was not allowed to block the line. The engineers pierced both walls of a house, arched them over and now the cars filled with troops run right through the house on the way to the front lines.

Uncle Sam has scattered high-powered scintillators along the Atlantic and Pacific coasts. With a marine at the head of each one of these searchlights it will be practically impossible for anything foreign to pass our shores at night undetected. The crews of these batteries are put through a strenuous course of training in this sort of work and know the minute an alarm is sounded just what to do.

American boys throughout the United States in preparation for service abroad are given a thorough training before they are sent overseas. Proof of that is shown by the splendid manner in which they are successfully driving back the Hun. Underground artillery telephone stations, replicas of work in

the trenches abroad, are used for drilling the men.

American soldiers are constantly being honored by the French populace. Parades form the greater part of the ovations held in their honor. Charming damsels presented the soldiers roses. Flowers were showered upon the American soldiers who won glory at Cantigny and Chateau Thierry.

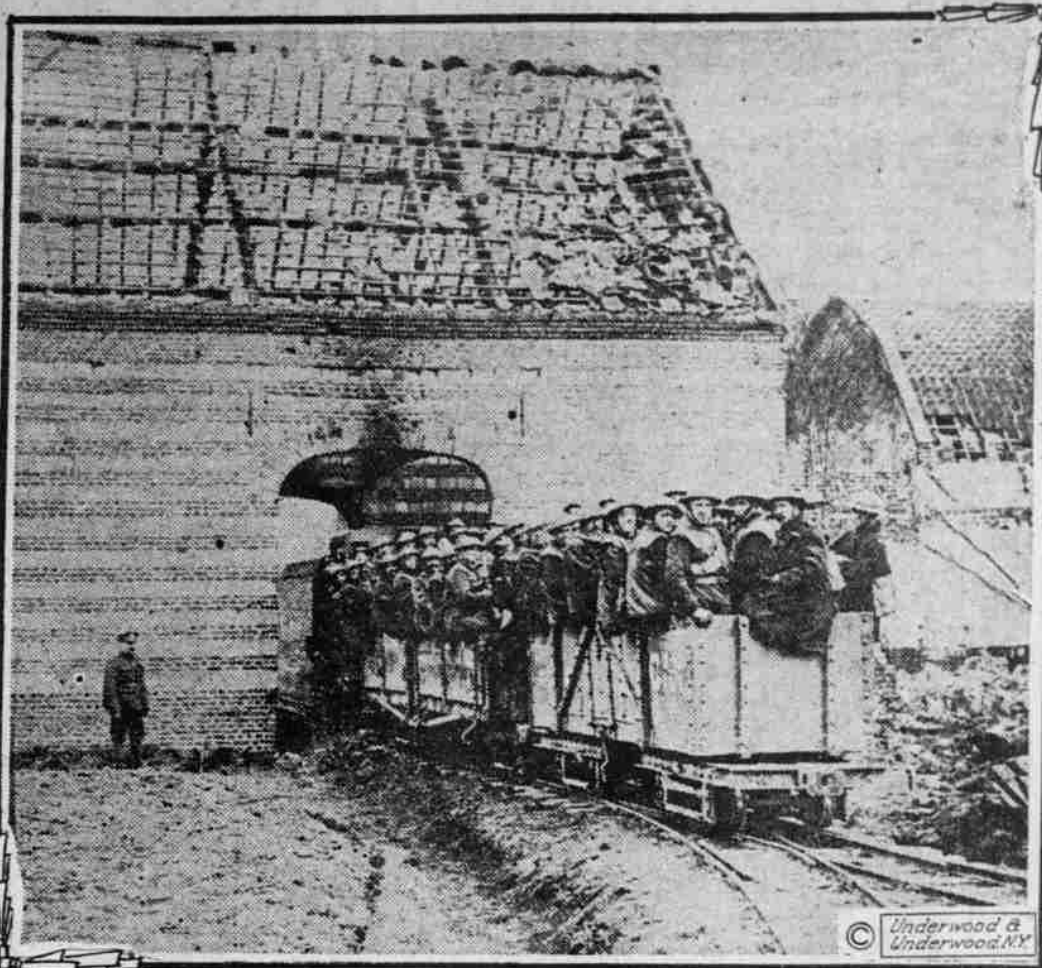

The mosquito tanks, as they are called, are the latest French creation. They are designed primarily to be light and swift in their actions and are being used almost exclusively by the French army for assault purposes. The *Kolnische Zeitung* declares that the French have used 800 of these small "fly" tanks in their counter-offensive. From the results attained by the French in the fighting of the past two weeks, it is self-evident that the tanks have proved to be most effective.

The Harvard, formerly an American yacht, has been transformed into a patrol boat. In the stern of the boat depth bombs are carried, ready to be released at a second's notice. It is these bombs that have proved so effective against the Hun U-boat.

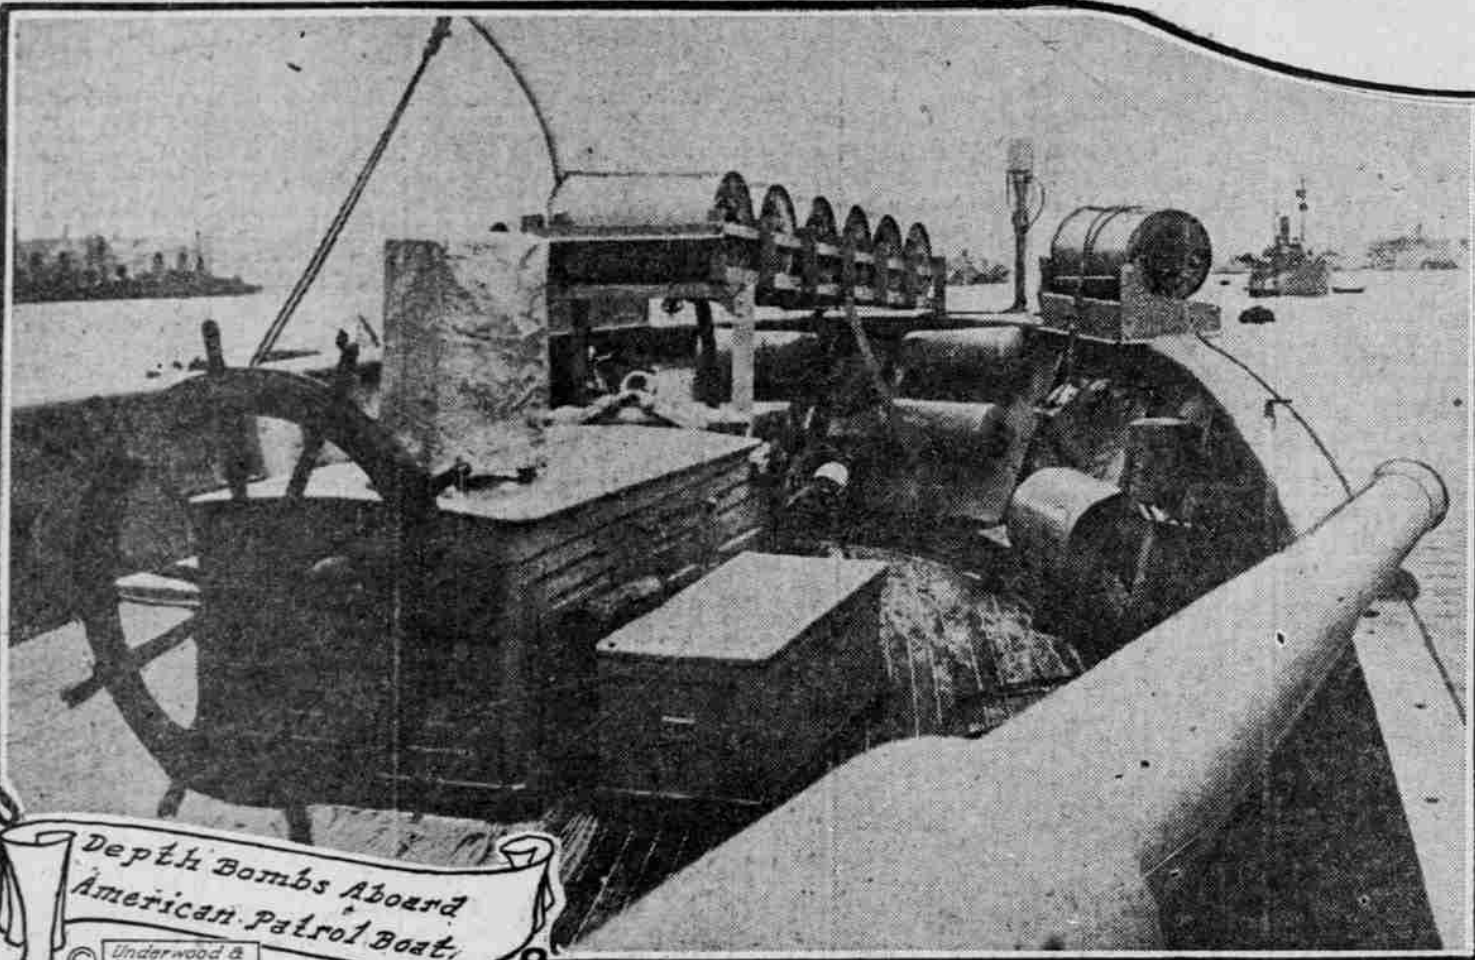

Our airmen training abroad wear the cap that is the distinctive feature of the uniform of the British Royal Flying Corps. Young American college men attached to the aviation section wear the Flying Corps cap while receiving instruction. They are part of an American air squadron in training in Great Britain.
