

NEWS OF WORLD AS SEEN BY CAMERA

ONE of the special features of the memorial horse show day under the auspices of the New York Women's League for Animals, in New York, was the presentation of a medal to Major-General O'Ryan's canine hero. Miss Elsie Ferguson, the noted stage and movie actress, pinned the medal on the dog, Billie Burke and Mrs. James Speyer, president of the New York Women's League for Animals, assisted.

From the many beautiful models who display and wear remarkable women apparel produced in the United States, six models have been selected to go to Canada to be photographed in the latest productions of that country for bathing suits, hats, suits, fur evening gowns, sweaters, shoes, stockings and lingerie. This quartet of models, fully qualified to do justice to Canada's fine productions, so pleasing to the Canadian women, left New York May 24 for Montreal.

The German submarine U-113, which it is supposed broke away while being towed, is here seen lying broadside on the Hastings beach, England, within only a few yards of the houses lining the waterfront. The craft is about 270 feet long.

Mount Kloet, Java, has burst into eruption killing 15,000 people and destroying 31 villages, being the second great catastrophe which has befallen the island in the last 18 months. During that time 2,000,000 inhabitants died from the Spanish influenza epidemic. It is the most densely populated island on the globe.

It is said that the marquis of Blandford, oldest son of the duchess of Marlborough, formerly Consuelo Vanderbilt, will visit this country some time in the coming summer. He is described as "typically Vanderbilt." He is 23 years of age and beside being popular in the younger sets, socially, in England, rides well and is fond of outdoor sports. During the war he served with the British army.

Colonel William G. Ball, U. S. A., whose work in organizing and managing the bakeries that supplied the daily bread for 2,000,000 men in France, has received promotion to the Legion of Honor.

Both France and the United States have recently honored Colonel Ball

who commanded the bakery division of General Pershing's forces, the former with the Legion of Honor and the latter with the Eagles, of a full colonelcy. Colonel Ball had one of the biggest jobs in the American expeditionary forces—the supplying of one pound of bread per man per day. When General Pershing went to France he picked Colonel Ball, then captain, for the job, although he was an infantryman and not a member of the quartermaster's corps, under which come the army bakeries. He introduced mechanical bakeries, securing the machinery in England and personally superintended the construction of three enormous plants each capable of turning out 500,000 loaves per day of two pounds each, untouched by human hands. Colonel Ball entered the army as a second lieutenant in 1899, served in the Philippines and acted as aide to General Funston in the Vera Cruz expedition and commanded the company farthest south in Pershing's dash after Villa.

A league of Red Cross societies pledged to fight disease and suffering throughout the world has been launched. The board of governors of the league is composed of Senator of the Italian Red Cross Count Frangoni; British Red Cross, Arthur Stanley; American Red Cross Henry P. Davison; French Red Cross, Comte de Ker-goyle; Japanese Red Cross, Professor Ninagawa. The league will establish headquarters at Geneva, where it can work in close co-operation with the international committee of the Red Cross and league of nations. The purpose of the league is to encourage the organizations and extension of work of all national Red Cross organizations, to disseminate in a practical form scientific and medical knowledge and to furnish medium for co-ordinating relief work in case of great national or international disaster.

People generally think of convalescence as a period during which the patient sits around waiting to get well. Judging from scenes in large military hospitals, the process of getting well is a pretty strenuous one for the wounded soldier. The portable electric oven is highly beneficial in its effects upon stiffened and inflamed joints. These modern therapeutic methods have saved many a veteran from lifelong mental or physical disability.
