## LABOR STRENGTHENED BY BRITISH COLONIES

President Wilson Asserts Delegates Will Help U. S.

### CONVENTION HAS MESSAGE

Recommendations of Conference Must Be Submitted to Our Own Government for Ratification.

ATLANTIC CITY, N. J., June 21 .-That British colonies having power in the league of nations general labor conference will prove a source of strength to the United States "Instead of an embarassment" was asserted in a cable message from President Wilson explaining recent changes in the labor covenant, read at the American Federa-tion of Labor convention here today

"I am convinced," read the president's message, "that except for changes in wording which do not affect the substance and spirit of those; before mentioned they remained the

now read 'members' and other similar unimportant changes.

"Fourth—On April 11 at the plenary conference which adopted the report of the labor commission, Sir Robert Borden made the following remarks:

"This convention is linked in many ways by its terms to the covenant of the league of nations and I think it desirable to make it perfectly plain that the character of its members and the method of adherence should be the same in the one case as in the other."

bership of the league of nations shall learn something, said air. Newlii late carry with it membership in the said organization.

"As you doubtless have in mind, the changes have the effect of giving the British dominions and colonies separate representation on the general confersion."

I am not going into office with any intention of tearing things up. I will not be a party to the use of taxpayers' money for publicity work for officers who are elected by the people.

That the changes did in fact the labor convention into har-with the league of nations cove-

That the changes are not sub-That the changes are not suc-tantially important inasmuch as every labor convention adopted by the con-ference must be submitted to our gov-ernment for ratification. Thus, the choice of acceptance or rejection lies in choice of acceptance or rejection lies in our hands, irrespective of the constitution of the general conference.

"I That the problems of the chief British colonies and dominions are much more like our own than like Great Britain's, so that their representation will be a source of strength to our point rather than an embarrassment.

"E That in my opinion the changes do not introduce any weakness or threat of any particular weakness for the labor provisions. They will stand, thanks to your efforts and guidance, as one of the progressive achievements of the peace conference, something from which peoples the world over may take courage and hope and confidence in a better future.

"I am sure that you will agree that nothing could be more fatal to these first aspirations than any failure to inderse these provisions. I count upon your support and sponsorahip."

Measures Taken for Safety on Day Peace Treaty Is Signed.

VERSAILLES, June 21.—Officials of the foreign ministry and military au-thorities attended a meeting at the local prefecture of police today to ar-range for adequate police measures on the day the peace treaty is signed. The authorities visited the palace this afternoon and examined the plans for police protection. It was decided to modify the plans considerably. Preparations for policing in and around the palace must be completed by Tuesday.

### ANOTHER FLIGHT PLANNED

Handley-Page Expected to Start Across Atlantic Today

JOHNS, N. F., June 21.-The ST. JOHNS, N. F., June 21.—The Handley-Page bombing plane, piloted by Vice-Admiral Mark Kerr, probably life of Dietz is expected to be heard, will start from Harbor Grace at 9 o'clock tomorrow morning on an attempted flight to the Irish coast, it was announced here tonight.

Testimony as to the birth and early life of Dietz is expected to be heard, as the government has called a number of witnesses who knew Dietz' family in Wisconsin to give testimony that he never was an Indian and assumed the relative to the property of the property o

tion of Labor convention here today by Samuel Gompers.

In this message President Wilson also asserted he believed changes in the labor covenant were "not substantially important, inasmuch as every labor convention adopted by the conference must be submitted to our own government for ratification." thus leaving the "choice of acceptance or rejection in our hands."

After first setting forth in detail the changes—which are similar to those already published and inforsed at yesterdays session of the convention—the president then proceeded to reply to a point raised in a cable sent him by Mr. Gompers.

This point, according to the president's reply, now appears in the treaty in the relation of the bords. All and the came as a surprise was the James of the Watter of the Watter of the defendant.

Yet in North Light.

changes in wording which do not affect the substance and spirit of those; before mentioned they remained the same.

"Second—Likewise your protocol to article 13 has been transferred to the body of the treaty under article 405. The "resolutions" adopted by the commission do not appear in the treaty, inasmuch as they were merely proposals of separate delegations and no part of the report as unanimously adopted for incorporation in the treaty.

"Third—A number of changes of form have been through the draft convention to make it conform in phraseology with the covenant of the league of nations as redrafted by the league of nations are needed. A few of the outlying districts cast very small votes, too. At the Benson Polytechnic school but 10 votes were east for directors and but 3 on the bond issue. All of the latter were against the bonds. At the Atkinson to the bond issue, all of them disapproving the issue and the bond issue and the bond issue and the bond issue and the original of the country of the proving the sense of the bond issue would be proving the sense of the bond issue would the proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue would be proving the sense of the bond issue and to the proving the sense of the bond issue and to the pre

The success of the bond issue would not have enabled us to make permanent provision for housing the children during the coming school year." said Clerk Thomas of the board of education last night, "but it would have assured proper housing during the succeeding year. Undoubtedly the board will act favorably upon the report of the buildings and grounds committee, which recommends the erection of 14 portable buildings and the division of three rooms in permanent buildings, giving 17 additional rooms for the next school year.

"The report of the committee was not the Rand School of Social Science."

# Oil Investment Information

## Absolute Robbery and Long US. Money-Making Chances

Perhaps the greatest essential industry in modern progress is the production, refining, distribution and utilization of oil products. Like coal, iron, copper or gold, it is substantial, but by far the most profitable of all natural resources, owing to the small overhead expense involved in oil operations after the initial expenditures.

able of all natural resources, owing to the small overhead expense involved in oil operations after the initial expenditures.

This is the age of oil, with an unprecedented growing demand and the world's visible supply of high-grade oil decreasing at an alarming rate. Few people have even a primary knowledge about oil, and the bulk of them are under the impression that all that is necessary is to drill a hole in the ground and, if you are lucky, you will strike oil and independence. In view of the fabulous profits of successful operators and the general ignorance of the public, human leeches using fake stock companies as bait, are robbing the unsophisticated with oily generalities and gushy liquid gold promises. Millions of dollars are being charmed from the people through cheap stocks which go to fatten a horde of Rufus Wallingfords.

Thousands of companies have been formed that have for their sole assets some cheap, worthless acreage near some legitimate operations. These never get beyond the stage of rig on the ground or promise to drill. Others go further and, to make a showing, actually drill on ground where it would be just as same to drill for iron, gold or ivory. These two classes are absolute 100 per cent bunko.

Another class with perhaps faith and honesty are drilling where they have some of the superficial indications of oil, which may or may not mean anything. This optimism and inexperience is just as disastrous to the stockholder as the bunko net. Again, others drill on the fianks of proven ground, which is in the real majority of instances also doomed to fallure, as the ring of dry holes around the 1600-acre Burk-Burnett pool evidence and the artesian wells surrounding the famous Salt Creek pool show.

Even with a perfect geological dome, syncline and anticline, seepgas, saturated shales and sandstones and good indications, it is a far cry to absolute natural essentials for the existence or the practical production of oil. The formation of oil requires prehistoric conditions

gas, saturated shales and sandstones and good indications, it is a far cry to absolute natural essentials for the existence or the practical production of oil. The formation of oil requires prehistoric conditions similar to the formation of coal, or, in other words, the concentration of a great bulk of animal or vegetable matter which has been distilled by water and chemical actions. After a multitude of these favorable conditions, the problem of the extent of the feeding ground, which may not have area enough to feed a dome or cause a sufficient concentration of oil to make it commercially practical, or again, the foll may be too deep or too widely distributed to extract with profit. Further, the character of the underground structure must be such as to give the oil an opportunity to migrate to the line of least resistance at the bottom of the drill hole. The gas pressure must also be strong and evenly distributed to bring about this result. Shales or sands with small porosity or saturation space cannot be prolific producers.

sands with small porosity or saturation space cannot be prolific producers.

In view of the multitude of considerations that spell failure in the oil business, there is only one absolute certainty, and that is proven ground, which, however, by the time it is proven, is so valuable that the small investor has no chance to get the benefit of it. As an illustration of proven ground, will instance the Salt Creek dome in Wyoming. Inside an escarpment containing 3400 acres there have been 50 wells drilled in every part of the dome. In every instance the drilling logs show the same uniform underground structure and in every instance have the wells come in with a uniform and consistent production. In proven ground it is merely a mathematical problem of what the ground will produce, which is based on the thickness of the oil-bearing stratas, the average saturation space of the same denoting the volume of oil. For instance, with oil-bearing stratas 100 feet thick and a porosity of 25 per cent, one-fourth of this space would be oil. The next problem is the recoverability of this space would be oil. The next problem is the recoverability of this oil, which is based on gas pressure, migration conditions and practical experience of wells that have been producing for years. In ground proven to this extent the profits on an acre of ground are just as demonstrable as that in any other industrial venture and can be computed to within a very small margin.

Anyone bearing the above general information in mind may save themselves some money in the future when they are approached with glittering oil propositions. Nothing is a cinch in oil unless it is absolutely proven ground of high grade, and then the element of honesty of administration, adverse legislation, litigation and other unforeseen things may wreck the most perfect opportunity in which there may not be a visible flaw.

It is seldom in even a long lifetime that one gets a chance to buy in a vastly profitable and flawless venture from an investment standpoint. Unfortunately

The people of Portland have been trained in a slow 4-to-8% run along investment lines. Many of you will not understand a language or business that eliminates per cent and talks double your money, or 5, 10 or 50 to 1 for money invested without taking any more risk than in any standard business. Now don't jump at the hasty conclusion that here is where the curtain goes up giving you a chance to get into a big thing on a shoestring and that you are going to have an opportunity to get rich quick. The offering I have to make is in no sense humanitarian, but business. Further, it is very doubtful that you can get any of it in case it looks good. In brief, I have bought a one-tenth interest in the Chappell Oil Company of Wyoming and Texas on a basis of real money, and lots of it. My arrangement is an option to pay until the first well comes in, and whatever I have paid for I get. I will be candid and state that I cannot, owing to the short time before me to complete the option,

## Safe and Sane **Opportunities**

take it all. So someone can have some of it on the basis that, after they have received the equivalent of \$3 for every one invested, they are to pay me 50% of the future profits. Further, they are to give me the first opportunity to buy their holdings in case they sell.

The Chappell Company is a Wyoming concern incorporated for \$1,000,000. None of their stock has been, is or will be on the open market. Their holdings and development are as follows:

Forty acres in the heart of the Salt Creek dome absolutely surrounded by production of the biggest kind in the history of oil. The Midwest owns the Salt Creek dome, with the exception of two school sections and several small tracts. Our lease is from the Midwest Company on a straight 25% royalty basis. While there have been no transfers in this dome, it is hard to get a line on values there, but the Midwest has made arrangements with the state of Wyoming to pay them \$3,000,000 for the right to take the oil from a school section. Eccles, with a 160-acre tract adjoining our holdings, has been offered \$2,000,000 for the same. The biggest producer of high-grade oil in the world is in the Salt Creek dome. Its production has been 1000 barrels an hour at the rate of \$1,500 per barrel, which makes the income from this well around \$40,000 a day with an overhead expense of three men as watchmen, about \$30 per day. Salt Creek has one well that has produced around 1,500,000 barrels and is still active. It has at least 15 wells that have produced over a half million barrels and are still gushing. Original stock in the Midwest Company is worth around \$188, that sold in 1912 for 25 cents.

E. T. Williams' wells on 40 acres outside the escarpment on the edge of the Salt Creek dome are worth \$25, to \$1 first invested. This is what our neighbors are doing and the values they represent. We have the same thing. On the Salt Creek property we have a rig. machinery and buildings all paid for and will drill as soon as Texas conditions permit. For complete information about Salt Creek, whi

In the Big Muddy field, the second biggest producer in Wyoming, the Chappell Company, has 160 acres surrounded on every side by big production. This lease was also procured from the Midwest Company. In this field, like in the Salt Creek, there are around 250 wells with never a failure of commercial production. Our neighbors there are the Meritt, Glenrock, Midwest and Humphrles, and the value of their stocks and holdings is fabulous. On the Muddy property we have one of the finest outfits in the field and a well down 2000 feet. In Texas the Chappell has 10 acres in the heart of the Burk-Waggoner field, the last big pool discovery, four miles north of the Burk-Wagoner pool. To be exact, we are 1670 feet east of the Burk-Wagoner pool. To be exact, we are 1670 feet east of the Burk-Wagoner well, 200 feet northeast of the Thrift No. 2, 1600 feet north of the Golden Cycle, with the Texas Chief, the higgest well in Texas, 2400 feet to the north of our holdings, and some big wells directly to the east of us. In other words, we are surrounded, close up on all sides, by the best producers in Texas. For this 10 acres we paid \$12,500 per acre as a bonus to drill, and must pay a 50% royalty besides. This ground is estimated to have a productiveness of from 250,000 to 500,000 harrels per acre. Oil in the Texas pools sells for \$2.40 a barrel. On the Texas holdings we have a well that is down to the oil sands, 1750 feet, and the work of standardizing has begun, according to a telegram received Friday. Two other rigs are up on this ground and the rotary drill has been moved from the first well and drilling is in progress on the second hole. When this first Texas well comes in, which is only a matter of hours, my option expires, and no more stock can be had. Experience has shown that with a well coming in, the stock has in every instance jumped from 5 to 30 times its former value. The Burk-Wagonner is selling at 33 times its former price. rary.

In the Big Muddy field, the second biggest producer in Wyoming,

In the Big Muddy field, the second biggest producer in Wyoming,

its former value. The Burk-Wagonner is selling at 33 times its former price.

Any one of the three leases in the three biggest proven pools in the world would be a big asset for a company; the three combined are unusual assets. As to the management of the Company, look at Bradstreet and see who Dr. Howard Weber is and what his position and rating is in the oil world. He is president of our Company and has given his time, money and experience to get Chappell on the map. He personally is drilling 38 wells in the Burk-Wagonner pool and has been offered a profit of \$2,000,000 on his holdings there. Our secretary, Mr. Durham of Casper, is one of the best land and oil lease lawyers in the west, having for years been U. S. land commissioner, handling the oil leases for the government. M. U. Weber, the son of the president, is manager and was brought up around oil dericks and knows all that can be known about the practical end of the son of the president, is manager and was brought up around oil derricks and knows all that can be known about the practical end of the business. Other officials of the Company are: W. C. Nichol, publisher of the Dally Province at Vancouver, B. C., and W. C. Gregory of Pocatello, who was identified with the late Senator Brady in big operations. All of the men connected with the Company are of exceptionally high standing. They are all giving their time and energy to the development of the Company without compensation. As they own the Company, anyone interested in a small way will get a square deal, as they would naturally take no action that was not to their own interest.

a square deal, as they would naturally take no action that was not to their own interest.

In conclusion, will state that no one is asked to put up a cent until they have convinced themselves that the venture is exactly as represented. Any investigation they desire to make I will pay for, even to a visit to the properties, if things are not exactly as alleged. The only misrepresentation possible is the underestimating of the real

merits of the proposition.

This is a matter that you can realize cannot be delayed, as at any time a telegram may come stating that the Texas well is in, which automatically closes my option and prevents anyone getting any of

this holding.

### What Makes Men of Blood and Iron? Men of Stamina, Force and Success-Men

Who Lead The Way Physician Explains Secret of Strong Nerves, Keen Active Brains and Great Physical Energy-says

Nuxated Iron Helps Put Strength and Energy Into the Veins of Men.

Frank S. Daggett of Los Angeles was elected president.

It is the men of blood and iron a par with the war-hardened fellows returning from camp and field—with which will forge ahead in the business and political life of the country to day. Living in the open, eating coarse foods and leading regular lives have made blood rich in Iron for these strong, the airby, vigorous specimens of manhood. But no such opportunity for building up their health is open to thousands of men and women in civil life whose wearing tasks and iron-moverished food sapther from all parts of Oregon have been called to meet in conference June 25-July I, by H. C. Seymour, state club leader, of the leader, of the leader, is expected to be present from washington.

The following leaders will attend: Frank Sexton, Klamath; R. E. Merris, Jackson; Wilfred Brown, Douglas; E. R. Peterson, Coos; Floyd L. Senter, Lane; John W. L. Smith and Mrs. M. L. Fulkerson, marion; Miss R. P. Snedeleker, Clackarmas; Esther Calkins, Multinomah; E. Morgan, Wasco; P. M. Nash, Linn; A. C. Strange, Baker, and N. C. Maris and W. C. Hoppes, state department of education.

It is the men of blood and iron—on a par with the war-hardened fellows returning from camp and field—with the war-hardened fellows returning from camp and field—with the business and political life of the country to day. Living in the open, eating coarse foods and leading regular lives have foods and make them weak, and much such and such opportunity for huilding up a stronger face of people by increasing the supply of iron in their blood, Dr. George H. Baker, formerly Physician and Surgeon, Monmouth Memorial Hospital of New Jersey, says: "Iron is absolutely necessary to change food into living tissue, muscle and brain, Withment and the blood of the living tissue, muscle and brain, Withment and the blood of the living tissue, muscle and brain, Withment and the blood of cooking have robbed us of much of the living tissue transition, with the march of the living tissue, muscle and brain, Withment and th of the Iron which Nature intended we should receive. For supplying this deficiency and increasing the red blood corpuscies, I know
