The Universal Pipeless Furnace

Heats Your Entire Home With One Register

and without any complicated "system." The Universal Pipeless Furnace placed in your basement has just one register directly above the furnace with a downward opening for cold air and an upward opening for warm air.

Circulation

is the prime factor with the Universal Asbestos Insulated Pipeless Furnace. Immediately after the fire is lighted the air from the various parts of the house starts in motion. The cold air is drawn to the furnace, through the outer cold air chamber and over the hot castings, returning heated and revitalized to the rooms throughout the house.

The Universal Pipeless Furnace gives a more even distribution of heat at a much less fuel cost than other heating devices. It meets every requirement of health, comfort and economy. It can be easily installed in homes already built as well as those under construction.

You are invited to investigate the merits of this splendid heating appliance.
