

DAM 500 FEET HIGH TO CURB COLORADO

Turbulent Waters Harnessed for Extended Irrigation.

PRELIMINARY WORK DONE

Vast Mass of Masonry Would Hold in Check Drainage From Six States in Boulder Canyon.

WASHINGTON, April 9.—The highest dam in the world, to join the states of Nevada and Arizona, and harness turbulent waters of the Colorado river for extended irrigation in the southwest, is to be constructed in the near future by the United States reclamation service.

The dam, according to tentative plans, would rise to the unprecedented height of 500 or 600 feet in Boulder canyon, where granite abutments rise more than 1000 feet above the water surface. Engineers of the reclamation service, afloat on barges, are now boring for bedrock beneath.

A lake varying from 20 to 50 miles in length would be backed up in the Colorado and Virgin rivers, and in this basin would be held in check for irrigation the drainage from almost the entire Colorado river basin, including parts of six states.

Dam Would Be World's Highest.

The proposed structure would be higher by far than the world's highest dam at present—Arrowrock dam, on the Boise river, Idaho, which measures 348 feet—and would top other famous dams in the United States, among the highest of which are:

Shoshone, on the Shoshone river, Wyoming, 323 feet; Elephant Butte, on the Rio Grande, New Mexico, 309 feet; and Roosevelt, on the Salt river, Arizona, 290 feet.

Preliminary work on the Boulder canyon project is being done under authority of congress, which appropriated \$20,000 for investigation. An additional \$75,000 was contributed by local irrigators. Engineers have located a site and are making borings for foundations. While these are incomplete, bedrock has been located at a number of points and the outlook is favorable, according to Arthur P. Davis, director of the reclamation service.

Government Aid Sought.

Interests from the irrigable region are expecting to bring their problem before congress at the approaching session, and through the committee on irrigation seek government aid. It is understood, but the exact nature of their proposal, whether an outright appropriation, government loan, or extension of credit has not been announced.

So unmanageable has the river been in the past that it has often changed its lower channel. Like a huge elephant, with body over seven states, it has swung its trunk about through the soft silt delta, uncontrainable at flood and destructive to canals and levees. So active did the trunk become in 1905 that it entered the California development company's Imperial canal, running through part of Mexico to the Imperial valley, and poured the entire river to the Salton river, 200 feet below sea level. It ate out the canal, enlarged the Salton sink and formed a cataract which threatened to work its way back through the soft land with great damage. Only the activity of the Southern Pacific railroad in building a dam across the widening mouth of the canal channel, after a hard fight with the river, was able to swing the channel back again to the gulf of California.

The Laguna dam, built in 1909, joining Arizona and California, has resisted flood waters, but complaints of broken levees, and later scant water for the rapidly increasing area of irrigated land continue. Complications with Mexico in the Imperial canal add to the problem, and the entire situation is pressing southwest interests to action.

In addition to the Boulder dam project, the Imperial irrigation district is pushing a plan to tap the Laguna dam and build an all-American high line canal on a higher level to irrigate more extensive acreage and avoid Mexican relations.

The Boulder canyon dam project, located below the Grand canyon, near Las Vegas, Nevada, where engineers are now boring, is the most advantageous position of any projected sites, according to the preliminary report made to congress by the reclamation service.

Million Acres to Be Irrigated.

A dam there would intercept most of the drainage of the Colorado river and therefore be a more complete solution of the flood control problem, the report says. Such a reservoir would also be more valuable in the irrigation of lands on the lower river in account of the greater proximity to them and the consequent possibility of regulating its flow more nearly in accordance with the fluctuating needs. Incidentally it would furnish a large amount of power. A further report on more recent findings is under preparation.

The irrigable lands of the lower Colorado river, as listed by the reclamation service, comprise many valleys and projects, with a total of 2,242,000 acres. They include: Cottonwood island, Mohave valley, Chemehuevi valley, Parker project, Palo Verde valley, Palo Verde, Mocha, Chucawalla valley, Cibola valley, Yuma project, Imperial irrigation district, and these extensions of the Imperial valley: East Tuley, Mesa, Palmas, Coachella valley and West Side.

QUEEN OF ENGLAND IS NOW SHOPKEEPER

First Lady of Britain Buys Antiques.

ADMIRAL BAILEY DIES

Father of Mrs. James P. Dunn of Portland Succumbs.

EL PASO, Texas, April 9.—Rear-Admiral Frank Harvey Bailey, retired, 69 years of age, died suddenly at the Union station here this morning while waiting for a train. He was on his way to his home in Gowanda, N. Y. He had been in El Paso a week.

Admiral Bailey was graduated at Annapolis in 1874 and was with Admiral Dewey at Manila. During the war he was in charge of the computing department of the bureau of steam engineering at Washington. Besides the widow, two sons and two daughters survive. They are James Bailey, Corning, N. Y.; Fred Bailey, Gowanda, N. Y.; Mrs. James P. Dunn, Portland, Or., and Mrs. Alfred Staples, Roseburg, Ore., Canada. The body will be buried in Gowanda.

VENTURE REAL GOLD MINE

Her Majesty Clever Buyer and Good Seller—Will Make \$25,000.

First Year—Wants \$125,000.

WINDSOR, England, March 27.—

(Special.)—Since King George ascended the throne Queen Mary has purchased various objects of antique art, varying from old colored prints to Chippendale chairs, that cost her well under \$10,000.

These purchases today are worth \$75,000, partly owing to the general rise in prices, but even if there had been no rise, the queen's purchase would have been worth at least three times the price she paid for them, for she is as good a judge of the value of old furniture and other antiques as any dealer in England, and can buy as cheaply as any.

The late Sir Guy Laking, a member of the celebrated firm of Christie's, who held the office of king's armorer, once told her majesty that if ever there was a revolution in England and the king lost his throne and fortune he would pay her \$15,000 a year to appraise for him.

Queen Buys Shop for \$15,000.

The queen a few months ago decided to turn her talents to account and start in business as a dealer in antiques.

Of course she could not do so openly, but that fact does not greatly hamper her. She does all her own buying and settles herself the price at which each article is to be sold.

She acquired the lease, stock and good will of a dealer in Windsor, who came to her knowledge that the dealer was in financial difficulties and was about to sell his business.

She sent Miss Shirley, her retired dresser, to negotiate the deal. Miss Shirley went to the dealer, told him she had heard he wanted to sell his business, asked him what he wanted for it, and stated that she wanted to buy.

"I want \$15,000," said the dealer.

The dresser clinched the bargain then and there by paying \$5000 in cash as a deposit, and two days later the business passed into the hands of Queen Mary. Her majesty arranged to keep the dealer as her manager at a salary of \$25 a week, plus 24 per cent commission on sales, and to continue to run the business in his name.

Good Profit Already Made.

Since she has purchased the business Queen Mary has actually sold the stock she purchased for \$3000 more than she paid for the whole business, including the good will and lease.

Her majesty recommends the shop to all her wealthy friends, and her recommendation is making the shop a veritable gold mine.

Few people know that the queen is the owner of it, but, even if by this time several people are beginning to suspect she is, the fact attracts them to buy rather than deters them from doing so.

Her majesty visits her shop almost daily when at Windsor. This excites no comment among the townfolk, because Queen Mary has been a regular patron of the shop for several years, and nothing would make them believe that the queen has become the owner of it.

One of her recent purchases was six Louis XV drawing-room chairs. She picked them up at an inn in the New Forest for \$225, and a week later sold them for \$1250.

King Unable to Save Penny.

For the most part the queen buys either from people who are not aware of her identity or who, if they were, would have no hesitation in declining her offer if it was not satisfactory to them.

Her majesty reckons to make \$300,000 out of the business this year. But she is looking forward to making much more than that; her object is to make \$125,000 a year, and she hopes to be able to do that in two or three years' time.

In pre-war days that was the sum that the king was able to invest each year after meeting all expenses.

Since 1917 his majesty has not been able to save a penny. It is the queen's object to establish a business that will enable her to put by every year the same sum as the king was able to save in pre-war days.

Logging Conference Monday.
