TYLER'S FRUIT PALACE.

It Is Just Now One of the Lone Sta

The great Texas fruit palace which is now being inspected by thousands of visitors to Tyler is a building well worth the attention of a tourist in the Lone Star State. The interior walls and columns are covered with green moss and paneled with German millet and stalks of sugar cane. The corners are the great arches are festooned with the various products of the fields of Texas. During the past few years Tyler has be come the center of a great fruit growing district, and the main feature of the exposition is an exhibit of fruits and flowers. It is said that the fruits and vegetables grown in the vicinity of Ty-

FRUIT PALACE, TYLER, TEX.

that is adorned with flowers, electric fountains and rustic bridges, and an artificial lake of great beauty is also one of its attractions. What is said to be the finest bicycle track in the state has been constructed around the entire grounds of the exposition, and cycle races are of daily occurrence. The Dixie guards of Little Rock, a company composed exclusively of pretty women, gives exhibi-tions each day of a military character, and there are numerous other ingénious amusement schemes to attract and entertain visitors.

Tyler is the county seat of Smith county, is located in the northeastern part of the great state and is a railroad center of considerable importance. In 1890 the population was nearly 7,000, but Tyler has grown rapidly since then and is one of the flourishing cities of the Lone Star State.

Didn't Understand Twins.

A festival in the family drew home-ward the scattered kindred. The boys, twins, had been long parted, and meanwhile one had married and in his vidowerhood reared his little son, now 7 years old. To him, by name Bobby, newly arrived in the house, enters the uncle whom he had never seen, so perfect a corroboration of his father that Bobby runs to him at once, clings to him and hugs his knees. A moment later, when his father really came and the laughing company were on the brink of comment and explanation, the poor lit tle man, giving him one mortally shocked glance, fell to the floor, sobbing, "Don't want-two-papes!"

The resident puppy, familiar with the bachelor brother, had almost as disturbing an experience. He stared and stared at Bobby's father, upon their introduction, sniffed at his garments, wavered his own friend and next upon the image backed into the corner, after making a brave stand against the supernatural. his insulted eye upon both men, barking and growling and indulging generally in the doggerel for thunder.—Chap

way.

THE NEW WOMAN.

Whatever a Man May Do She Is Said to Insist Upon Doing

The new woman is popularly supposed to be a woman of liberal educa tion and advanced ideas, a woman prepared to maintain her rights and claim her privileges, and make and keep a bracketed with sheaves of wheat, and her convictions or exert her abilities. She is supposed to look with a certain disfavor on domesticity, to go about with a chip on her shoulder among oldfashioned people who fancy that a woman's natural sphere is in the narrow world of home. The new woman, we learn incidently, cares little for ler are not even surpassed by those raised in the wonderful valleys of California. above the old stupid notion that love Outside the palace the talent of the and matrimony are cardinal points in shook with laughter, "as soon as the landscape gardener has transformed a the destiny of her sex. She is said to mails could bring a reply I got it. He be opposed to be sacrificing herself on with pitiful scorn on the mother of a half-dozen boys and girls. Whatever a man may do, this product of the fiu de siecle fancy is said to insist upon doing, setting her feet firmly down on the antiquated myths which once obtained—the myth of the weaker to protection by the stronger, of the adoration of the mother as the most poor relation. dessed of all women on the earth, of the queenly dignity of her who rules the home and keeps alight the fire on the hearth.

Our question is where to find this personage so glibly described and discussed, but so elusive when she is sought? She is absent from our drawing rooms, where today, as in former years, gracious matrons and fascinating maidens impart to society the ease, the flavor, the sweetness, which make the intercourse of well-bred people with one another equally reposeful and stimulating.

She is not to be discovered in the nnumerable professions and trades which women have made their own, from the pulpit to the printing-office. The woman doctor, albeit an excellent physician, is as womanly as our mother Eve, and one seeks in vain for novelty in the woman professor, artist, minister, clerk, type-writer, journalist or women engaged in any avocation known to the utility of the hour. Purely womanly under the student's cap or gown, or under the frills and flutings of the beautifully arrayed debutante, our women of the hour are just what their mothers and grandmothers were-sincere, single-hearted, straightforward, impulsive, emotional, self-denying lovable, tenderly loving beings. "God Almighty made them to match the men," and until he unmakes them they are unlikely to change in any very important particular.—Harper's Bazar.

SUNLIGHT MADE TO ORDER.

It Is a Prismatic Experiment, in General Terms, Applied to Electricity.

Telsa, says an article quoted in Current Literature, had two big undertakings on hand when his laboratory caught on fire and was destroyed in and stared again. Then he leaped upon New York. The more important of these, from his point of view, was the and echo of him bewildered, and finally production of hight by the vibration of the atmosphere. According to the inventor, the light of the sun is the result of vibrations in 94,000,000 miles of either, which separate us from the center of the solar system of which we are a part. Telsa's idea is to produce here on earth vibrations similar to those which cause sunlight, and thus In all governments there must of ne- give us a light as intense as that of the sun, with no danger of obstruction from the clouds. The inventor has already done something towards accom-lish government possesses information plishing this end when the fire oc-of a still bolder invasion of British terin suspense without prejudice till you plishing this end when the fire ocagain taken the subject up in a way. To illustrate his principle it is only and note the brilliancy of the light it the year.—New York Sun's London die; not till the heavens fall; love will is a prismatic experiment, in general produces through vibration alone. It terms, applied to electricity. Telsa can compute vibrations as readily as most people count they would like to the story that one of the gentlemen he have. He can tell you the number of met in Chicago had a great deal to say A surface judgment is a daring one vibrations produced by a fly in action of his travels in Europe. Colonel Lowandeed if it presumes to be other than a and draw intersting comparisons therefrom. For example, this young man French literature, and that George Sand from Smiljan will tell you that a certain kind of fly peculiar to the swamps of Central America moves his wings about 25,000 times to the second. You may doubt the accuracy of this statement in your own mind, but if you hunger for details Tesla will sit down and convince you with figures adduced from a scientific contemplation of the say I did!" cried the Chicago man, and

"All I have to do," he said recently, is to duplicate the number of vibrations required to light up the sun, and the practicability of my theory will have been demonstrated. It is difficult for me to give you an idea that you will readily grasp about this question of vibration. In ordinary life our minds do not deal with the figures that come up in such investigations. I have come to the conclusion that the sunlight is produced by five hundred trillion vibrations of the atmosphere per second. In order to manufacture the same kind of light it will be necessary to produce an equal number of vibrations by machinery. I have suc-eeded to a certain point, but am still at work on the task."

Striped crepons are very fashionable Many of the silk and satin crepons show flowered grounds and lace stripes. These goods are made up over taffeta silk.

Black and white is more fashionable than it has ever been before. Black and white lightweight silks, very narrowly striped, are among the season's most popular fabrics.

This is a season of box plaits. They are often made of passementerie and of rows of overlapping ribbon, which be-gin on the shoulder, cross the bust diagonally and end at the waist line.

ARMOUR'S POOR RELATIONS. The Hig Packer Tells a Punny Story About

One Re Hasn't Made Rich. It has been a matter of current report

for years among board of trade men that Phil Armour has no poor relations, says a Chicago newspaper man. "He will not allow any of them to remain poor," veteran of the board remarked by way of explanation of this unusual good fortune of a rich man. "He makes them all rich.

"I have heard that story before," Mr. Armour remarked, with a smile, when one of his friends asked him about it the other day. "But it's a mistake. I have enough of them."

Then the big packer burst out in a laugh, and his friends knew a good story was coming.

One of the poor kind-he lives down in Illinois-is one of the most persistent men I ever knew. He keeps writing fair standing ground for herself in and writing for money all the time. He whatever field she chooses to exploit is not a bad fellow, only improvident, and if he displayed the same energy in attending to business that he does in writing to me he would have been rich a long time ago. Well, he kept sending one letter after another, saying that if he only had \$500 he would be all right. He repeated this so often that one day I told my secretary to send a letter saymarriage, regarding it as an incident ing that if he would't bother me for a year I would send him \$500."

"Well, sir," and Mr. Armour's side said, 'Make it \$1,000 and two years, the altar of childhood, and to look and I thought it was such a clever turn that I sent the money.' "What happened next?"

"In about three months he wrote again, saying the agreement was off because his wife hadn't been included." Mr. Armour seemed to think the whole thing was a great joke and espe-cially enjoyed the shrewdness of his

PULLMAN'S LEGAL ADVISER.

Robert T. Lincoln, Son of Old Abe, Said to Hold This Responsible Position.

Since his return from the court of St. James little has been seen of Robert T. Lincoln. He dropped almost entirely out of sight after reaching his old home. Occasionally he would be seen at the Chicago club, but he never appeared in court and did not go often to his law office in the Woman's temple. Some of Mr Lincoln's friends remarked he was out of the legal swim and added that the honor of representing his country at St. James had proved very expensive.

These solicitous friends were very much misinformed. Mr. Lincoln is kept quite busy in the law business. He is the personal legal adviser of George M. Pullman and spends practically all his time in the office of the palace car magnate. When Mr. Pullman leaves town, ex-Minister Lincoln accompanies him. They are constant and inseparable companions. By those who think they can detect Mr. Lincoln's style it is claimed that all of the prepared inter- landing her when time was called after views and correspondence credited to ten minutes' hard fighting. Another Mr. Pullman since the strike began were the work of ex-Minister Lincoln.

"Corporation law-Pullman corpora- Ogden, of Cheltenham, in eight mintion especially—is queer business for a son of Abe Lincoln to be engaged in," said one of his father's admirers yesterday. "I wonder what Abraham would

Now that parliament has adjourned the country will be deprived of official news of this and other foreign necessary to take a long bar of glass complications during the remainder of Letter.

Knew George Sand Well.

Colonel James Russell Lowell tells was one of his favorite authors.

"Oh, yes," exclaimed the Chicago gentleman, "I have had many a happy hour with Sand." 'You knew George Sand, then?' ask-

ed Colonel Lowell, with an expression of surprise.

"Knew him? Well, I should rather then he added as a clincher. "I roomed with him when I was in Paris."-Chicago Record.

Don't Die In Paris.

Americans visiting Europe should be careful not to die in a Paris hotel, says a Globe letter. It is too expensive. John H. Ludham of New York, traveling with his father, stopped at a second rate Paris house. Ludham, Sr., was suffering from a chronic ailment, was taken suddenly worse and died next morning. There was no question of contagion, and the price of the room was 6 francs a day, but the hotel keeper charged 1,000 francs on account of the death in his house, and Ludham, Jr , found it cheaper to pay it, as he was compelled to sail for New York, rather than stay and fight the claim.

Catharine Cole. The friends-and she has scores of

them—of Catharine Cole (Margaret Field) will be pleased to learn that late letters from Bavaria, where she is now under treatment for a nervous malady, bring encouraging news. The change, rest and treatment are all proving beneficial, and Mrs. Field, in letters written by herself, gives evidence of seeming hopeful of the results of the experiment with Father Kniepp's remedies. The relatives of this gifted an I greatly beloved writer are indulging in the hope that she will come home at least on a fair way to recovery,

One cannot but hope that some one of the expeditions sent out to explore the Arctic will reach the North Pole, make endless photographs of it, and secure volumes of detail about its magnetic currents and topographical peculiarities, and set at rest the fever that has raged among the adventurous for explorations in regions which have proved only fatal to humanity. It eems as if the new expedition were simply courting death in a new way, for it is very doubtful whether, since the idea of a northwest passage from Europe to Asia was abandoned, the ac-tual discovery of the Polte would add enough to our knowledge to do more than satisfy general curiosity. The position of the Pole is a geographical certainty, and it is doubtless bleak and forbidding beyond description, yet men are insatiable in their efforts to attain the possible, and will doubtless persevere until a means has been found of reaching it. Mr. Andree, the Swedish engineer, is about to seek the North Pole by balloon, and his project is seconded by men noted in the scien-tific world. The balloon is to be built in Paris at a cost of \$10,000, and will be so constructed as to be capable of being filled with gas at any point in the Polar regions whither gas in cylinders will have been transported. The aeronaut expects to cruise from a central point over the entire Polar basin, to explore it and secure such full details concerning its peculiarities NOW that the curiosity of meteorologists and explorers and learned scientife bodies in general shall be completely satisfied. How many lives will have to be sacrificed in this new way cannot be foretold, but ballooning in other latitudes is extra hazardous. In the Polar regions it seems foolhardy. - Current Lit-

Angling for Human Fish. A novelty in the way of sport , says an article quoted in Current Literature, was inaugurated the other day at Royal Aquarium, Westminster, when a series of curious angling contests was begun in the swimming annex. Fishermen of reputation demonstrated their skill with cord and line in attempts to bring to land human fish, who, having been duly hooked, clever-ly imitated salmon in their efforts to regain freedom. The result was always entertaining, and frequently very exciting, especially when the angler and the "fish" were fairly matched. In the first competition, although Mr. Hardy, of Ainwick, with a seven-ounce trout rod and line, essayed three times to overcome lves, a strong swimmer of 196 pounds weight, the latter on one occasion succeeded in breaking the line. Miss Burnett, whose weight is 154 pounds, proved an excellent fish; and Mr. Slater, of Newark, who angled in the Nottingham style, with a green-heart rod and a spinning undressed line, had not succeeded in lady, Miss Sylvia, of slighter build. however, gave in to the angling of Mr.

By local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure Deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the muccus liming of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the muccus surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.
