O. A. C. HAY NEWS

"Do not mow when the crop is wet with rain or dew," warns Professor Pitts. "The moisture will dry off much faster while the plants are still standing. Cut in the morning as soon as the plants are dry. If the crop is heavy stirring with a tedder or otherwise will aid in getting the curing process under way. Bake as soon as the hay is thoroughly wilted and curing well started. Complete the curing by windrow or cock."

"Mowing in the afternoon is not objectionable if done just before evening, as the dew will not injure the green grass. Bake the next morning as soon as the hay has reached the stage mentioned. A side delivery rake seems preferable as it stirs up and moves all the hay. Do not mow more hay at one time than can be handled to advantage. The crop suffers much less loss if standing than if cut and lying on the ground uncurd for."

THEFT INCREASING

With the present wage scale it seems almost incredible that petty larceny should be thriving in the City of Portland. There must be something radically wrong with the mind that steps aside to petty theft when labor has a better wage than for years—better than ever before. There should be some corrective place in the organization of our civil sources where minds that sink to this can be tried out for a more useful plane—and then if it becomes hopeless judges should be mighty careful of the parole system.
