

SAMSON --- Iron Horse!

A Mechanical Surprise

We have seen in our lifetime the development of the automobile, the electric light, the telephone, the wireless telegraph, the phonograph, the aeroplane, the motion picture, etc.—all great inventions—but of all the modern inventions that benefit the farmer, there is nothing stands out so prominently, so absolutely necessary, so often wished for, and which will be so universally used by every farmer, large or small, as the SAMSON IRON HORSE.

Takes the Place of Three Horses

Here at a very reasonable and low price is a machine that will do—with only one man operating both tractor and implement or vehicle, most every job that a team of two or three horses will do—do it accurately and reliably—never needs a rest, will not shirk, get scared or run away.

It is driven with a pair of lines just exactly as you would drive a team.

You pull both lines back and the Iron Horse backs up; release and it goes forward; pull to the right and it turns to the right; pull to the left and it turns to the left.

With the most delicate pull of the reins, it will go just where you put it, accurately.

It is safe, dependable and sure—so simple that a man, woman or boy can operate it; no brakes, no foot pedals to contend with or mix you up.

Ideal for All Kinds of Cultivating

The Iron Horse in the orchard, cornfield, bean or sugar-beet field will successfully do the work of two men and two teams. It has high clearance and will, by removing the drawbar, straddle corn or kafir corn up to two or three feet.

The machine is not heavy, will not crush down or pack the ground because all four wheels pull and provide traction.

It Has Arrived

Everybody has been looking for it. It is finally here.

The long-looked-for, long-talked-about and much-wanted invention—a two to three-horse capacity, efficient, easily controlled, economical, four-wheel-drive, short-turning, low-priced tractor, that, with one man operating both tractor and implement or vehicle, will do every job on the farm that two or three horses will do.

The performance of this invention in the hands of an unskilled user, either man, woman or boy, is nothing short of marvelous.

Experienced automotive engineers pronounce it a wonderful machine.

Old and young farmers, who see it, invariably nod their heads and say, "I am going to have one," because this machine will do any job on the farm without horses.

It means, in short, that the farmer, who from early morning until late at night, has to do the hundred and one tedious chores—feeding horses, haying, bedding and cleaning out the manure, currying and harnessing, bridling, watering, hitching up and unhitching, working with them every day, whether he uses them or not—can wipe out these burdens forever with a Samson Iron Horse.

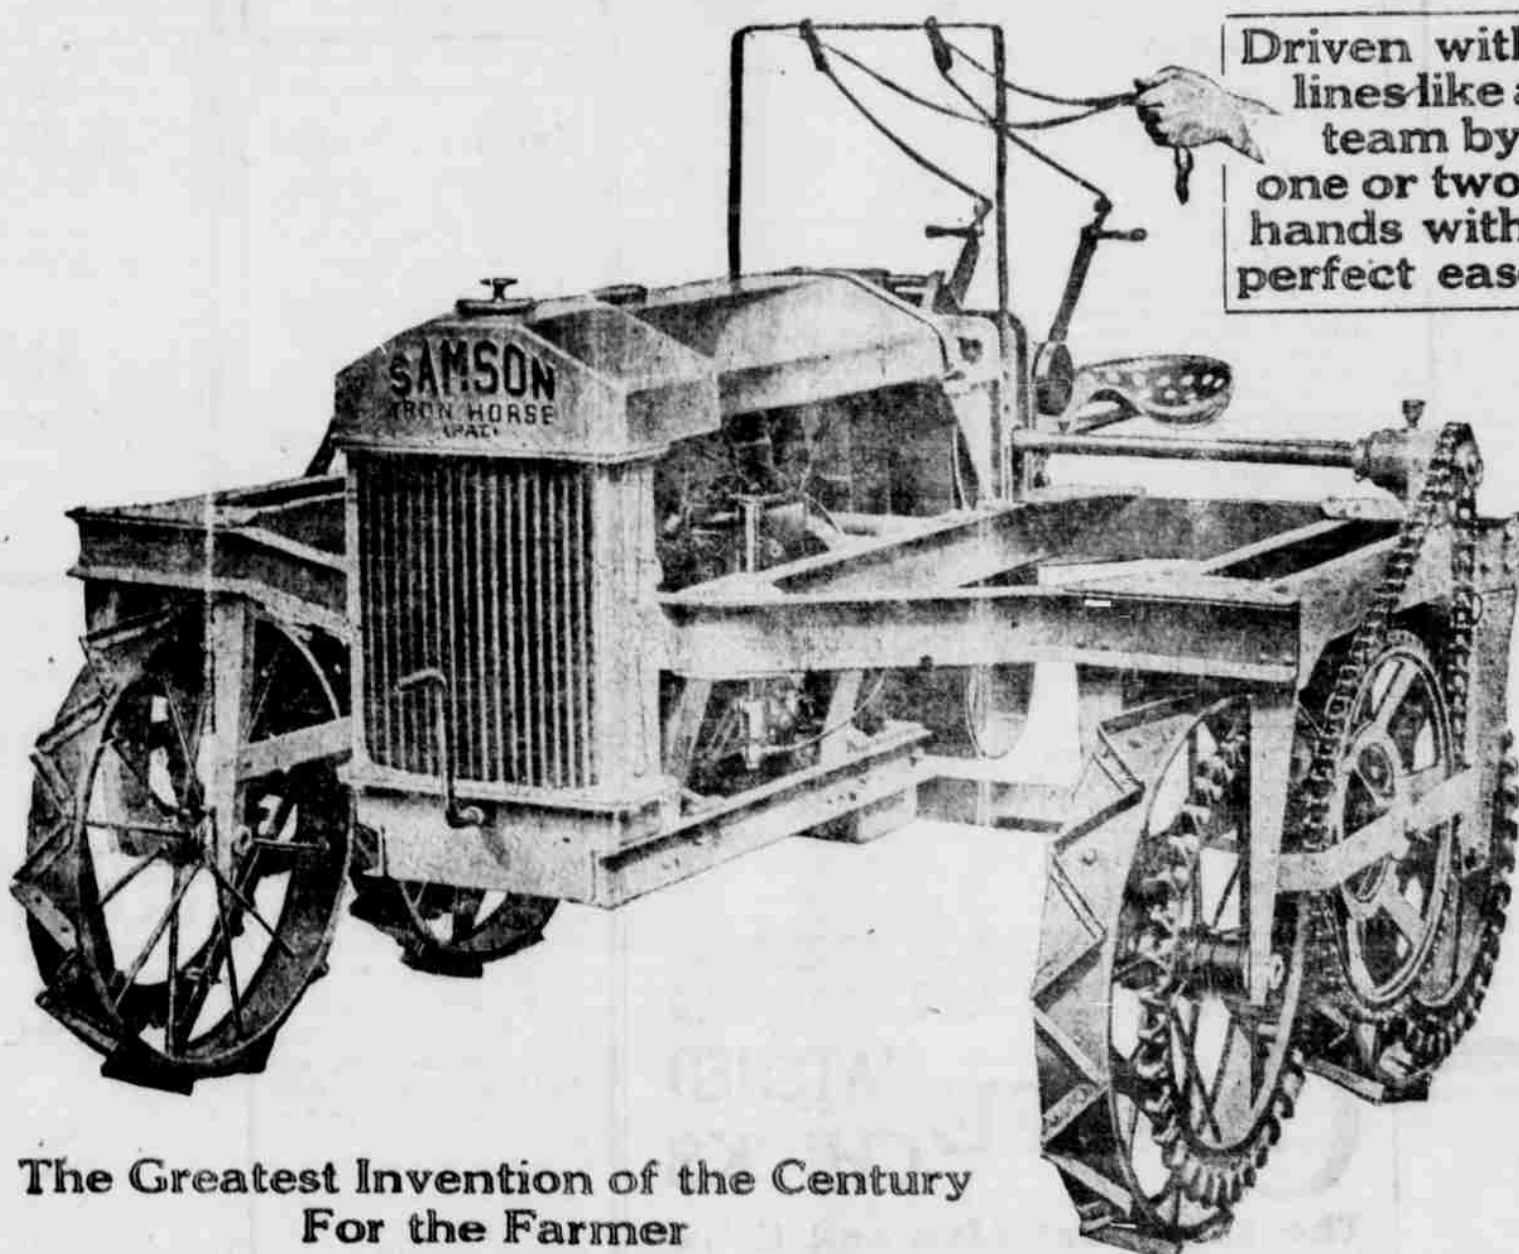

It means increased farm production at lower labor and feed cost, higher land values, greater efficiency, more profit and pleasure on the farm, because it is the ONE TRACTOR of universal application that can be used by every man who farms ten acres or more.

PRICE

F. O. B. Hillsboro

\$730

Fully Equipped — Royalties Paid

Driven with lines like a team by one or two hands with perfect ease

The Greatest Invention of the Century For the Farmer

Belt Power, Too

The Samson Iron Horse is also equipped with a belt pulley that will do a dozen different jobs on the farm, such as grinding feed, shelling corn, sawing wood, running cider mill, grindstone, pumping water, portable sprayers and any other portable job necessary on the farm.

There are few jobs of any kind that the Samson Iron Horse will not do either by pulling or belt power.

The Samson Iron Horse is the final type of small tractor. No farmer will do himself, his farm or his family justice until he investigates, and sees with his own eyes just what the Iron Horse can do. It is all alone in a class by itself, and will prove the most profitable and popular implement on every farm of ten acres or more, because it is right, in construction, operation and price.

The SAMSON IRON HORSE

Will revolutionize farming throughout the world, because it actually takes the place of horses. It is very simple, being equipped with a powerful, simply designed, valve-in-head four-cylinder motor. It has automatic throttle, governor and regulator, so that when you come to a hard pull it absolutely takes care of itself without bother or watching. It is fully covered with patents and patents pending.

What the Iron Horse Will Do

With only one man operating both tractor and implement or vehicle, the Iron Horse will handle a 2 or 3-horse grain drill, a single disc, a harrow, the mower, the corn planter, 2-row corn cultivator, bean and sugar-beet cultivator, the corn binder, a 3-horse plow, the hay rake or tedder, wagon with hay loader, road drag and road scraper, small road grader; will haul stone boat, small timbers. Is also ideal for doing all kinds of chores requiring team and wagon. In fact, it is the every-job tractor that the whole country has been looking and waiting for and must be seen in operation to be fully appreciated.
