

## Why Buick Valve-in-Head Motors Have More Power

Internal combustion motors are heat engines. The more heat retained in their cylinders, the more power they generate.

Water-jacketing space absorbs heat.

Buick Valve-in-Head motors have about 20% less water-jacketing space than the L Head type and about 15% less than the T Head type.

That is one of the reasons why Buick Valve-in-Head motors have more power.
