

It Has Won the Friendship of a Nation

There has never been the slightest uncertainty about the position of the Jewett with the American public.

When it was first introduced last year it was greeted, not as a newcomer, but with all the confidence and respect accorded an old friend.

And the explanation is really quite simple. Motorists had long waited for just such a car as this stout-hearted six.

They had pictured it in their minds as the ideal expression of economical motoring—so the Jewett immediately came into its own.

Since that time an immense volume of good will has been created throughout the nation.

The Jewett has consolidated every one of its friendships. It has proven that it is not only spirited and good looking, but strong, sturdy, dependable.

As might be expected, the sales

chart has accurately reflected this appreciation.

Month by month the figures have climbed until now the Jewett is firmly established as one of the fastest selling and broadest selling cars on the market.

It has, we sincerely believe, done more than any other automobile in preaching the sound doctrine of six-cylinder ease, comfort and efficiency.

It has made men conscious of the elements they should expect in a practical car, and they have done the rest.

In 1923 the new and greatly improved Jewett will continue its march of triumph.

It is now a seasoned product—tried and proven.

In the year to come it will vastly increase its circle of enthusiastic friends and still more firmly establish itself as a safe, sound and profitable investment.

CONTROL OF SCAB

Apple scab and pear scab are likely to cause much more damage this season than last, reports the O. A. C. Experiment Station. Winter or dormant sprays will not control these diseases. Two sprays of lime-sulphur applied in early spring, before blossoming, are necessary to get the cleanest fruit and greatest profits. The first application should be made just after the winter buds unfold and the second just before the blossoms open. Use one gallon of concentrated lime-sulphur to 30 of water for the first spray and one to 40 for the second spray.

Bridge grafting is a simple method of grafting that may be used to cover girdling of fruit trees by mice or other animals. The work should be done when the sap is beginning to flow, as the bark peels better. It is preferable to cut the scions for the graft before that time, although it is not necessary that they be dormant.

Oil sprays alone will not control fungous diseases, such as scab anthracnose, brown rot, leaf curl, peach blight or mildew. Oils are of advantage only for the control of certain insect pests and cannot be used as a substitute for the proper fungicide.

Thousands of young fruit trees, planted last spring, were killed during the summer by attacks of borers, says A. L. Lovett, chief in entomology at Oregon Experiment Station. This large loss was sustained in spite of the fact that borers may successfully attack only unthrifty, poorly growing trees. The excessive drought conditions of last summer caused a severe drain on the vitality of the trees, particularly those young trees which had had insufficient time to develop a good root system.

Two methods of preventing borers from attacking the trees are suggested by Mr. Lovett. The placing of a barrel stave, or similar shield on the southwest side of the tree to cast a shadow on the trunk is one method. This prevents sun scald of the bark which attracts borer attacks.

A good whitewash is also a protection against attacks of boring insects. One of the most successful recipes for making whitewash is 8 pounds of quick lime, one-half pound of glue or casein (powdered), one-fourth pound of copper sulphate, and one pound of flaked naphthaline, with enough water to make a whitewash about the consistency of paint. Carbolic acid at the rate of one-half pint to eight gallons of whitewash may be substituted for the naphthaline.

Moss and lichens on fruit trees may be quickly destroyed during the winter by spraying with ordinary lye at the rate of 1 pound to 6 or 8 gallons of water. If San Jose or other scale is present, add the lye dissolved in a little water to the usual winter strength lime sulphur. Thorough spraying of this solution will remove both the moss and scale. Lye removes moss most rapidly, but not permanently. For permanent prevention the O. A. C. Experiment Station recommends the usual Bordeaux spray. Applied for apple tree anthracnose, peach-leaf curl, and prune and cherry blossom blight, it will prevent the loss from developing.

—County Agent.

JOHN V. GREENAWALT

John V. Greenawalt (Jack) died Monday, February 12, 1923, at the home of Alfred Dysle, after an illness of several months, due to heart trouble.

He was born in Lancaster, Penn., March 8, 1850, and was the eldest child of Elizabeth and Adam Greenawalt.

In his early thirties he took Horace Greeley's advice and came west, going first to Montana, then to Spokane, and later to Reardon and Washougal, Washington. As time went on he crossed over into Oregon and worked for the Union Meat Co., at Troutdale, for eleven years.

He had been living with Alfred J. Dysle, of Bethany, for some time, and had been actively engaged until the last five months, when dropsy set in and incapacitated him from working.

Jack was a staunch Odd Fellow, being a member of Washougal Lodge No. 194, and also a Muscovite. It was upon his motion that Washougal Lodge was so called.

He was a great lover of children. Wherever he went he made friends and was jovially hailed with "Hello, Jack." His hobbies were animals and birds, and at various times he had apiaries, poultry, and rabbits.

He leaves a wide circle of friends and a host of relatives in Pennsylvania to mourn his loss.

Funeral services were conducted Wednesday, February 14, by Rev. K. J. Stratemier, of Bethany Presbyterian church, at Lin-

COLLINS TO LECTURE

Christian Science Society, at Grange Hall, Main St., Sunday Services—Sunday School at 10; morning service at 11; lesson subject, "Mind." Wednesday evening service at 8.

Peter W. Collins, of Boston, the man who has answered a million questions, will arrive in Hillsboro the evening of March 1st, to deliver, under the auspices of Hillsboro Council, Knights of Columbus, his lecture, "What America Means to Us."

As a lecturer, campaigning against the menace of Red Radicalism, Socialism, Bolshevism, I. W. Wism, and other enemies of Americanism, under the direction of the K. of C. Supreme Board of Directors for the past decade, Collins has established the world's record for answering questions in the open forums always held at the conclusion of his lectures.

Grand Knight W. J. Sohler announces that the lecture will be entirely free to the public and that any of Mr. Collins' hearers is entitled to ask whatever question he or she deems pertinent to the subject of the lecture.

Mr. Collins is one of a corps of experts in the sociological and economic field carrying an educational campaign against organized radicalism under the auspices of the K. of C. He is one of the best equipped authorities on industrial relations in America, having served for years as a trade union international official. In 1917 the U. S. government enlisted Collins as industrial expert, and in 1918 he undertook the direction of K. of C. reconstruction and employment system which found jobs in civilian life for more than 300,000 former service men without a cent of cost to either employer or employee.

In his lecture Mr. Collins will deal with the potentialities for social disorders in the world, and especially in America to-day, and define the forces that can successfully counteract the organized effort to disrupt the present social status. His experience with Labor and Capital has equipped him with an intimate knowledge of industrial disputes and his contact with employers and employees enables him to understand thoroughly their viewpoints.

Wherever Mr. Collins has lectured during his years of service with the K. of C., press and public of all politics and creeds have agreed that his message of common sense for right relations between capital and labor and unwavering opposition to Bolshevik doctrines has contributed largely to a clear understanding of the social, industrial and economic problems that confront the world today.

F. B. Clark, of Farmington, was greeting friends in the city Monday.

C. J. Anderson, of West Base line, was in the city Monday.

Almost Sold Out!

The stock of Date Prunes for Spring delivery is almost gone. Only a limited number of orders can be accepted. The growers and consumers have put their stamp of approval upon

PERFECTION BAKERY

A. C. Moeding, Prop.

HILLSBORO, OREGON

How do you make your BREAD? Do you use powdered Milk, Expanso, Fermento, etc.—No. The PERFECTION BAKERY uses Dakota hard-wheat flour, milk 4½ per cent butterfat, pure vegetable shortening, highest quality yeast, salt and cane sugar—mixed in an Automatic mixing machine, baked in a modern Revolving oven, wrapped in a sanitary package.

MADE IN HILLSBORO
Phone or ask any dealer for PERFECTION BREAD

DODGE BROTHERS BUSINESS SEDAN

Dodge Brothers, with equal aptness, could have named it the Family Sedan.

In the first place, it is big and roomy—a five-passenger car that will really seat five adults in comfort. There is no space wasted on superfluous adornments. Every inch of body and chassis is put to actual use.

There are no delicate cloth furnishings to be soiled by the children. The seats are upholstered in durable and attractive blue Spanish leather.

There is no sensitive varnish to be easily scratched or finger-spotted. The body is steel-built—a new principle in Sedan design—making it possible to finish the exterior in Dodge Brothers oven-baked enamel, the most durable finish known.

The rear seat furnishings come out—instantly converting the rear section into a spacious carrying compartment—handy for carrying trunks, boxes and household luggage of all sorts.

Children can romp and play to their hearts' content in this car, and when cleaning time comes, you can turn the hose on it—inside and out.

The price is \$1405 delivered
