GET THE SLUGS

Early gardens are subject to severe injury by slimy, slow moving, repulsive slugs. The plants may be protected with a repellent spray of bordeaux mixture diluted as recommended on the container will give good results. In addition prepare a poison bait of calcium-arsenate used at the rate of one ounce to one pound of chopped lettuce leaves. Mix these thoroughly and place in small heaps near the plants and grames to be protected. Kale, clover, or other succulent leaves may be substituted for the lettuce.

Fruit worms and bud moths are becoming active on the opening cluster buds of apples and pears. Where they appear in sufficient numbers to attract attention, add lead-arsenate to the regular delayed dormant or to the pink spray at the rate of two pounds to 100 gallons of the solution.

A supply of Station Circular No. 35 "The Cherry-Fruit Fly or Maggot" is available at the county agent's office at Hillsboro. The cherry-fruit maggot can be controlled by poisoned bait spray.

The county agent has also received a supply of bulletins on "Onion Maggot" and "Peach and Prune Twig-miner."
