SKAGGS Cash stores
Money saving UNITED STORES Distribution Without Waste

The Origin and Operation of Skaggs Stores

Business policies are the charts by means of which successful undertakings are steered through the seas of commerce—road-maps, pointing the way to the desired destination. If they are right they lead to success through service. If they are wrong—well, the costs of commerce are strewn with the wrecks of businesses that tried to operate under mistaken or deliberately deceptive policies. We who come into daily contact with established policies of large institutions are prone to take them as matters of course, and either approve or disapprove of them according to our various lights. Rarely does it occur to us to consider the manner of their making or the amount of time and thought—sometimes days and weeks of concentrated study—that has led to their formation and promulgation.

The first Skaggs store differed from other stores chiefly in the important particular of its almost unbelievably low operating costs. Despite the fact that it was founded with the avowed determination of eliminating waste from the distribution costs of foodstuffs, it was difficult to realize at first how much had really been accomplished and the extent to which the methods employed were destined to influence retail practices. Neither could it reasonably be expected that the founder could foresee and lay down rules and policies to govern the thousands of contingencies and problems that arose as the business grew and spread. These had to be met and solved as they presented themselves and out of their solution and the soundness of the judgment with which the solution was applied has grown this vast organization and the policies and personnel that have made its outstanding success possible.

For instance, it was discovered that the savings in operating costs—as compared to the operating costs of the average retail grocery—in themselves constituted a liberal profit. The Federal government, in its investigations of profiteering, had determined that from 16 to 18 per cent was a fair operating cost for the average grocery—to which must be added a fair net profit. Operating costs in the Skaggs store was less than half the amount allowed by the Government—a condition due entirely to the spirit in which it was founded and the operating economies effected and one which permitted the new store to do business and make a liberal profit on a margin less than the actual costs of the average store. This fact, plus the disposition to share the savings affected with the consumer, enabled the first Skaggs store to do a constantly increasing volume of business and eventually accumulate a surplus sufficient to warrant the opening of a second store.

The second Skaggs store was opened in October, 1916, and subsequent like ventures followed in due course and order, but it is worthy to note that in the working out of a plan of operation for the second store, good business practices and the principle of the Golden Rule were observed.

This plan was based upon a profit-sharing ideal of equity to the customer, the manager and the originator. Its fruition is evidenced by a practical, tangible, FUNCTIONING reality and its application has served to weave a closely knit organization—alike in ambition, desires and practices.

It has given a present and future to clear headed young men, who in their ambition to achieve are three willing to serve. It has put responsibility in the hands of those most affected and has never overridden their rights nor ignored their ideals, privileges and suggestions. It has attracted loyal hearted men—men not susceptible to petty bribery nor shortsighted promises. It has given us more than three hundred busy stores and upward of fifteen hundred energetic young people with trained minds, open hearts and eager hands, thousands upon thousands of partons, and it has elevated the standards of food distribution throughout the entire West.
